Crankcase Depression Regulator and Flow Control Valve

SERVICING

• See Figures 46 and 47

— This system is found only on diesel engines.

The Crankcase Depression Regulator (CDR) is designed to scavenge crankcase vapors in basically the same manner as the PCV valve on gasoline engines. The valve is located by the right cylinder head cover. On this system, the valve and filter are replaced as an assembly.

The ventilation pipes and tubes should also be cleaned and replaced as wear and tear dictates.

— Do not attempt to test the crankcase controls on these diesels. Instead, clean the valve cover filter assembly and vent pipes and check the vent pipes. Replace the breather cap assembly every 30,000 miles (48,000 km). Replace all rubber fittings as required every 15,000 miles (24,000 km).

Evaporative Canister

SERVICING

The only regular maintenance that need be performed on the evaporative emission canister is to regularly change the filter (on those 1988–90 models which utilize one; 1991–98 trucks do not have a canister filter) and check the condition of the hoses. If any hoses need replacement, use only hoses which are marked EVAP. No other type should be used. Whenever the vapor vent hose is replaced, the restrictor adjacent to the canister should also be replaced.

The evaporative emission canister is located on the left side of the engine compartment, with a filter located in its bottom (if applicable).

— For further information on the evaporative emission system, please refer to Section 4.

To service the canister filter:

1. Note the installed positions of the hoses, tagging them as necessary, in case any have to be removed.
2. Loosen the clamps and remove the canister.
3. Pull the filter out and throw it away.
4. Install a new canister filter.
5. Install the canister and tighten the clamps.
6. Check the hoses.

Battery

PRECAUTIONS

Always use caution when working on or near the battery. Never allow a tool to bridge the gap between the negative and positive battery terminals. Also, be careful not to allow a tool to provide a ground between the positive cable/terminal and any metal component on the vehicle. Either of these conditions will cause a short circuit, leading to sparks and possible personal injury.

Do not smoke or all open flames/sparks near a battery; the gases contained in the battery are very explosive and, if ignited, could cause severe injury or death.

All batteries, regardless of type, should be carefully secured by a battery hold-down device. If not, the terminals or casing may crack from stress during vehicle operation. A battery which is not secured may allow acid to leak, making it discharge faster. The acid can also eat away at components under the hood.

Always inspect the battery case for cracks, leakage and corrosion. A white corrosive substance on the battery case or on nearby components would indicate a leaking or cracked battery. If the battery is cracked, it should be replaced immediately.

GENERAL MAINTENANCE

Always keep the battery cables and terminals free of corrosion. Check and clean these components about once a year.

Keep the top of the battery clean, as a film of dirt can help discharge a battery that is not used for long periods. A solution of baking soda and water may be used for cleaning, but be careful to flush this off with clear water. DO NOT let any of the solution into the filler holes. Baking soda neutralizes battery acid and will de-activate a battery cell.

Batteries in vehicles which are not operated on a regular basis can fall victim to parasitic loads (small current drains which are constantly drawing current from the battery). Normal parasitic loads may drain a battery on a vehicle that is in storage and not used for 6–8 weeks. Vehicles that have additional accessories such as a phone or an alarm system may discharge a battery sooner. If the vehicle is to be stored for longer periods in a secure area and the alarm system is not necessary, the negative battery cable should be disconnected to protect the battery.

Remember that constantly deep cycling a battery (completely discharging and recharging it) will shorten battery life.
