House Control 371

D 371

07/96

The House Control 371 is a microprocessor-based control that provides individual temperature control for up to 5 zones. Each zone can be either connected to the boiler (hot water) loop or to the mixing (warm water) loop. The supply water temperature to the zones is modulated based on both the outdoor temperature and indoor temperature feedback from each of the zones. This outdoor reset strategy reduces indoor temperature swings and increases system efficiency. Other energy saving functions include a heating system Warm Weather Shut Down (WWS-D) and the ability to lower indoor temperatures for a night set-back period. The control has an Optimum Start / Stop function which automatically calculates when to bring each zone out of night setback in order to ensure they are returned to their normal operating temperatures as the setback period ends. The 371 allows integration of an indirect fired DHW tank into the system. This helps provide faster DHW tank pick-up times and greater energy savings. The control can also receive a setpoint demand on either the mixing loop or the boiler loop for snow melting, hot tubs, or other loads.
