Yang Jisheng, 2021-01-19 Yang Jisheng's *The World Turned Upside Down* is the definitive history of the Cultural Revolution in withering and heartbreaking detail. As a major political event and a crucial turning point in the history of the People's Republic of China, the Great Proletarian Cultural Revolution 1966-1976 marked the zenith as well as the nadir of Mao Zedong's ultra-leftist politics. Reacting in part to the Soviet Union's revisionism that he regarded as a threat to the future of socialism, Mao mobilized the masses in a battle against what he called bourgeois forces within the Chinese Communist Party (CCP). This ten-year-long class struggle on a massive scale devastated traditional Chinese culture as well as the nation's economy. Following his groundbreaking and award-winning history of the Great Famine, Tombstone, Yang Jisheng here presents the only history of the Cultural Revolution by an independent scholar based in mainland China and makes a crucial contribution to understanding those years lasting influence today. *The World Turned Upside Down* puts every political incident, major and minor, of those ten years under extraordinary and withering scrutiny and arrives in English at a moment when contemporary Chinese governance is leaning once more toward a highly centralized power structure and Mao-style cult of personality.

Artificial Intelligence in Data and Big Data Processing Ngoc Hoang Thanh Dang, Yu-Dong Zhang, João Manuel R. S. Tavares, Bo-Hao Chen, 2022-05-18 The book presents studies related to artificial intelligence (AI) and its applications to process and analyze data and big data to create machines or software that can better understand business behavior, industry activities, and human health. The studies were presented at The 2021 International Conference on Artificial Intelligence and Big Data in Digital Era (ICABDE 2021) which was held in Ho Chi Minh City, Vietnam, during December 18-19, 2021. The studies are pointing toward the famous slogan in technology: "Make everything smarter," i.e., creating machines that can understand and can communicate with humans and they must act like humans in different aspects such as vision, communication, thinking, feeling, and acting. A computer would deserve to be called intelligent if it could deceive a human into believing that it was human. Alan Turing.

China After Mao Frank Dikötter, 2022-11-15 A blow-by-blow account. An important corrective to the conventional view of China's rise. Financial Times. From internationally renowned historian Frank Dikötter, winner of the Samuel Johnson Prize, a myth-shattering history of China from the death of Chairman Mao to Xi Jinping. Through decades of direct experience of the People's Republic combined with extraordinary access to hundreds of hitherto unseen documents in communist party archives, the author of *The People's Trilogy* offers a riveting account of China's rise from the disaster of the Cultural Revolution. He takes us inside the country's unprecedented four-decade economic transformation from rural villages to industrial metropolises and elite party conclaves that vaulted the nation from 126th largest economy in the world to second largest. A historian at the pinnacle of his field, Dikötter challenges much of what we think we know about how this happened. Casting aside the image of a society marching unwaveringly toward growth in lockstep to the beat of the party drum, he recounts instead a fascinating tale of contradictions, illusions, and palace intrigue of disasters narrowly averted, shadow banking, anti-corruption purges, and extreme state wealth existing alongside everyday poverty. He examines China's

navigation of the 2008 financial crash its increasing hostility towards perceived Western interference and its development into a thoroughly entrenched dictatorship with a sprawling security apparatus and the most sophisticated surveillance system in the world As this magisterial book makes clear the communist party's goal was never to join the democratic world but to resist it and ultimately defeat it **Chicago Tribune**, 1978 **2021 International Conference on Big Data Analytics for Cyber-Physical System in Smart City** Mohammed Atiquzzaman, Neil Yen, Zheng Xu, 2022-01-01 This book gathers a selection of peer reviewed papers presented at the third Big Data Analytics for Cyber Physical System in Smart City BDCPS 2021 conference held in Shanghai China on Nov 27 2021 The contributions prepared by an international team of scientists and engineers cover the latest advances made in the field of machine learning and big data analytics methods and approaches for the data driven co design of communication computing and control for smart cities Given its scope it offers a valuable resource for all researchers and professionals interested in big data smart cities and cyber physical systems
