QUESTION 3

- 3.1 Read the passage below and answer the questions that follow.

Peat lands are special wetlands that play a very important role in ecology. A peat land, of approximately 6 000 years old, near Mafikeng is almost destroyed because of excessive extraction of water from the nearby Molepo river. The water is extracted for human consumption.

Peat lands like the one near Mafikeng is exceptional and play an important role in storing water as well as preventing climate changes.

Dr Phil-Louis Grundling said that carbon that is 'held' or 'stored' by peat lands combats climate change because it decreases the amount of carbon in the atmosphere.

Peat lands trap about one third of the world's carbon. Approximately 50% of wetlands worldwide are peat lands. However in South Africa about 10% of the wetlands are peat lands.

Grundling explained that peat lands can hold about 1 000 times its own mass in water. This replenishes the water table and is the source that keeps streams flowing. The "sponge effect" of the peat also makes it possible to store water that is then released during dry seasons.

Dr Grundling said that it might be too late to restore the peat land near Mafikeng but it might be possible to restore some parts of it if more water is supplied to this peat land.

The result of this destruction is depletion of the water table. The habitat of numerous fish and frog species that lived in this peat land was also destroyed.

From: *Beeld*, 24 September 2016.

- 3.1.1 Give TWO other reasons (not mentioned in the passage) that can lead to the destruction of wetlands. (2)
- 3.1.2 Discuss reasons from the passage regarding the importance of these specific wetlands for the environment. (4)
- 3.1.3 Suggest a way in which this peat land near Mafikeng can be restored. (2)

Ramified Natural Theology in Science and Religion Rodney Holder,2020-10-15 This book offers a rationale for a new ramified natural theology that is in dialogue with both science and historical critical study of the Bible Traditionally knowledge of God has been seen to come from two sources nature and revelation However a rigid separation between these sources cannot be maintained since what purports to be revelation cannot be accepted without qualification rational argument is needed to infer both the existence of God from nature and the particular truth claims of the Christian faith from the Bible Hence the distinction between bare natural theology and ramified natural theology The book begins with bare natural theology as background to its main focus on ramified natural theology Bayesian confirmation theory is utilised to evaluate competing hypotheses in both cases in a similar manner to that by which competing hypotheses in science can be evaluated on the basis of empirical data In this way a case is built up for the rationality of a Christian theist worldview Addressing issues of science theology and revelation in a new framework this book will be of keen interest to scholars working in Religion and Science Natural Theology Philosophy of Religion Biblical Studies Systematic Theology and Science and Culture

[A Living History of Immunology](#) Kendall Arthur Smith,2015-11-04 In the highly competitive world of biomedical science often the rush to publish and to be recognized as first with a new discovery concept or method is lost in the hurly burly of the moment as the maddening crowd moves on to the next new thing One of the great things about immunology today is that it has only become mature as a science within the last half century and especially within the past 35 years as a consequence of the revolution of molecular immunology which has taken place only since 1980 Consequently most of those who have contributed to our new understanding of how the immune system functions are still alive and well and still contributing Thus A Living History of Immunology collates many stories from the investigators who actually performed the experiments that have established the frontiers of immunology Accordingly this volume combats revisionist science by those who want to alter history by telling the stories a different way than actually happened In this regard one of the good things about science vs other disciplines is that we have the written record of what was done when it was done and by whom Even so we do not have the complete story or narrative of how and why experiments were done and what made the differences that led to success This volume captures and chronicles some of these stories from the past fifty years in immunology
