

## Progression of Mathematics Skills Toward Algebra Readiness (PMSTAR), From Grades 5–8

### Purpose of PMSTAR

In some sense, as middle school teachers, you are all in the business of preparing your students to take and pass a rigorous algebra course and, eventually, a critical examination on the same material.

Where do you, as a teacher, and what you are teaching fit into the framework?

### Key Definitions

**Estimation** is the ability to calculate an approximation of a mathematical result. It might include finding upper or lower bounds of a quantity that cannot readily be computed precisely.

**Generalization** is the ability to move from a specific or particular case down to a more general case. An example is  $2 + 3 = 3 + 2$  to  $x + y = y + x$  where  $x$  and  $y$  are integers.

An **algorithm** is an effective method for solving a problem expressed as a finite sequence of steps.

### How to Use the Framework

This framework is designed to show exactly where you fit into the algebra readiness process. The grade levels are less important than the content. First, find the topics that you are teaching this year. (Because this framework is for algebra readiness, some of your topics may not be shown; however, this does not mean that these topics are not critical for student development, just that they are not along the algebra path.)

For each subject area, you will see arrows in and arrows out; and there may be different types of arrows. A simple arrow from one topic to another shows a connection. A circle placed on an arrow is a key input or output that is critical for the next step and should be emphasized. Larger arrows show critical prerequisites.
