### **Explorations into Sustainable Development with Forest and Biodiversity Conservation** Dr. Ritu

Dhingra, 2023-06-02 Forests being the lungs of planet Earth are the most important ecosystems. They act as carbon sinks and sustain a huge amount of carbon in them. They play an extremely important role for the survival of the living beings on this earth. From human beings to the flora and fauna of the earth's ecosystem depend on the forests in some way or the other. Forests are the repositories of enormous biodiversity on this planet. They are an abode to millions of species of animals including human beings, plants, and microorganisms. They also give massive ecosystem services to mankind and to all the living beings thriving on this earth. They regulate climate, water cycles, and carbon sequestering on this planet. They even provide a livelihood to human beings all over the world. They check global warming on this earth. The parameter of sustainable development is that forest and biodiversity is conserved for the coming generations also. Forests are the most important repositories of terrestrial biological diversity. The diversity of life amongst the living beings and their distinct habitats, the interactions between the various components of the biodiversity, makes this planet a habitable place for various life forms. Forest conservation is extremely important for intergenerational equity and the principle of sustainable development paves the way. The forests, especially in the domains of forestry and agriculture, provide 40% of the world's economy. This is due to the biological diversity in the forest ecosystems. 70% of the world's poor populace who live in rural areas is directly dependent on biodiversity for their livelihood. A rough estimate of 60 million indigenous folks are somehow reliant on forests for their daily needs. The Supreme Court of India in *Rural Litigation and Entitlement Kendra v State of Uttar Pradesh* elucidated the importance of ecosystem services as provided by the forests.

*Journey of the Mind: How Thinking Emerged from Chaos* Ogi Ogas, Sai Gaddam, 2022-03-08 Two neuroscientists reveal why consciousness exists and how it works by examining eighteen increasingly intelligent minds from microbes to humankind and beyond. Why do you exist? How did atoms and molecules transform into sentient creatures that experience longing, regret, compassion, and even marvel at their own existence? What does it truly mean to have a mind to think? Science has offered few answers to these existential questions until now. *Journey of the Mind* is the first book to offer a unified account of the mind that explains how consciousness, language, self-awareness, and civilization arose incrementally out of chaos. The journey begins three billion years ago with the emergence of the universe's

simplest possible mind From there the book explores the nanoscopic archaeon whose thinking machinery consists of a handful of molecules then advances through amoebas worms frogs birds monkeys and humans explaining what each new mind could do that previous minds could not Though they admire the triumph of human consciousness Ogi Ogas and Sai Gaddam argue that humans are hardly the most sophisticated minds on the planet The same physical principles that produce human self awareness are leading cities and nation states to develop superminds and perhaps planting the seeds for even higher forms of consciousness Written in lively accessible language accompanied by vivid illustrations Journey of the Mind is a mind bending work of popular science the first general book to share the cutting edge mathematical basis for consciousness language and the self It shows how a unified theory of the mind can explain the mind s greatest mysteries and offer clues about the ultimate fate of all minds in the universe
