Serway, 2002      **Miracles and the Concept of Impossibility: The Resurrection and the Shroud of Turin** Anthony Walsh, 2023-04-25 Miracles and the Concept of Impossibility takes a fresh look at the miracle of the resurrection of Jesus A miracle is inexplicable by the methods of science and thus deemed impossible I examine the concept of impossibility with primary reference to David Hume's notion that there is a boundary of probability beyond which the improbable becomes the impossible calculated at 10<sup>150</sup> Physicists have declared that the universe is inevitable and at the same time impossible Its inevitability is obvious but the mind boggling improbability that a biocentric universe exists vastly exceeds the probability boundary If a miracle is defined as an impossibility the universe is a miracle The origin of life is just as miraculously impossible because the probability of dead organic molecules evolving into the organic molecules of life is even less than it is for the existence of the universe r This book also looks at what the Resurrection means in terms of the atonement and the concepts of hell and universal salvation This is followed by an examination of the evidence for the Resurrection and historical and archaeological reasons for trusting the New Testament Secular explanations of the Resurrection are examined and pitted against the Christian account in terms of their explanatory scope and power The last two chapters look at the silent witness to the resurrection the Shroud of Turin bearing the image of a terribly tortured and crucified man For 125 years scientists have been unable to discover how the image was imprinted on the cloth thus I conclude that it is the silent witness to the Resurrection the authentic Shroud of Jesus Christ      **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1972 First multi year cumulation covers six years 1965-70      *The Cumulative Book Index* , 1965 A world list of books in the English language      **Catalog of Copyright Entries. of Bohr's and Einstein's work on the emergence of quantum electrodynamics and on some of the sharp philosophical and scientific issues that arise in current scientific practice e.g. in superconductivity research. In addition several essays deal with critical issues within the philosophy of science both historical and contemporary e.g. with Cartesian notions of mechanism in the philosophy of biology with the language and logic of science e.g. with new insights concerning the issue of a physicalistic language in the arguments of Neurath, Carnap and Wittgenstein with the notion of elementary logic and with rational and non-rational elements in the history of science.
