Time Will Tell Mari Riess Jones, 2019 Attention is a central concept in psychology The term attention itself has persisted even though it implies a static insulated capacity that we use when it is necessary to focus upon some relevant or stimulating event Riess Jones presents a different way of thinking about attention one that describes it as a continuous activity that is based on energy fluctuating in time A majority of attention research fails to examine influence of event time structure i.e. a speech utterance on listeners moment to moment attending General research ignores listeners endowed with innate as well as acquired temporal biases Here attending is portrayed as a dynamic interaction of an individual within his or her surroundings Importantly this interaction involves synchronicity between an attender and external events This emphasis on time and synchronicity distinguishes the author's theory called Dynamic Attending Theory

DAT from other approaches to attending which characterize attention metaphorically as a filter resource pool spotlight and so on Recent research from neuroscience has lent support to Riess Jones theory and the goal of this book is to bring this new research as well as her own to the wide audience of psychologists interested in attention more broadly **The Effect of**
