Irani,Clayton Fowler Callis,1963 **Evaluation of Normal Versus Non-Normal Grain Size Distributions** G. Vander Voort,A. Kazakov,O. Pakhomova,2016 ASTM E112 13 states that it covers test methods to determine the average grain size of specimens with a uni modal distribution of grain areas diameters or intercept lengths It states that these distributions are approximately log normal However it does not describe how one can determine if the specimen s grain size distribution is a uni modal normal Gaussian distribution ASTM E1181 02 2015 says it covers test methods to characterize grain size in products with any other distribution other than a single log normal distribution of grain sizes However the only example given in Appendix X2 shows the percentage of the number of intercept measurements in 38 length classes from 0 to 1 to 37 to 38 mm Thirty eight classes is far too many to properly reveal the grain size distribution This procedure revealed a log normal distribution but it is not in terms of ASTM grain size numbers which makes it less useful No guidance was given in ASTM E1181 to determine the nature of the grain size distribution In this paper a mathematical and graphical approach was defined Grain Boundary Reconstruction for Grain Sizing JJ. Friel,F. Glazer,EB. Prestridge,1991 Measuring ASTM grain size by automatic image analysis is often made difficult by the inability of the image analyzer to detect grain boundaries accurately For this reason a logic based method for grain boundary reconstruction has been developed ASTM G was measured at various grain sizes both before and after image

processing Automatic image analysis was used to measure the grain size on actual microstructures as well as on standard grain size charts that had grain boundaries intentionally removed ASTM G was measured by both planimetric and intercept methods The grain size calculated on the basis of area was much more sensitive to incomplete boundaries than was the calculation based on intercepts Nevertheless the software was able to restore the boundaries and the correct grain size was calculated
