Heath, 2021-02-19 Intellectual property law and practice in China has changed dramatically since the first edition of this influential book published in 2005. Today judicial and administrative application of law plays a major role and accordingly this entirely rewritten new edition draws on an abundance of court and administrative decisions clarifying how the law is applied. In a thorough and systematic manner the authors clearly demonstrate the sophisticated level of legal certainty available for domestic and foreign entities doing business in China including the adaptation of the legal framework to new technologies, broadened scope of protected subject matter, improved quality of filings and significant enhancement of enforcement not only with regard to remedies but also to procedural aspects. Providing comprehensive coverage of all aspects of intellectual property protection in China including analysis of IP related provisions of China's new Civil Code, the book emphasizes issues of concern to foreign traders and investors such as the following: copyright law and software protection, protection of trademarks including Chinese character and Roman script trademarks, well known marks and bad faith applications, technology transfer, enforcement of trade secret and patent protection, criminal liability for infringement, unfair competition and antitrust law, role of the binding interpretations of the Supreme People's Court, administrative regulations that supplement the laws, co-operation with administrative authorities, protection of geographical indications, protection of trade names, domain name dispute resolution, special patent related laws protecting such areas as plant varieties, integrated circuit layout designs and relevant provisions of the distinct laws of Hong Kong and Macao. Full descriptions of the competencies of China's IP related institutions are included with detailed attention to procedural matters. Brief historical notes in each chapter feature the most significant changes in each amendment of law and regulation. Because in China the laws are supplemented and interpreted by numerous guidelines and circulars issued by ministries or courts, the up to date knowledge and awareness provided in this new edition is essential for all companies investing in China or considering such investment as well as for practitioners counselling their clients on strategies. In addition, officials and policymakers involved in trade or other relations with China will benefit from a comprehensive update of what the current law is and a critical view of what the challenges are. The 2021 IPLCN is a recommended read for those who seek a well written English textbook which covers the main principles of Chinese IP Law. Clearly outlined, it is probably one of the best of its kind on the market. Its existence is welcome and necessary in the current era where languages are still obstacles. By Tian Lu. Book Review for The IP Kitten, September 2021. *Mauritius Business & Tourist Guide*, 2005. **Foundation Course for Advanced Computer Studies**.

Franck Ismael Djédjé, 2015-11-13 In the modern world computer systems are playing a greater and greater part in everyday life. From office work to entertainment to providing information, the personal computer is quickly becoming a more integral part of the home. However, most PC users have no idea how most of the parts which make up their computer work internally. I am one of those who find that the framework provided by the school curriculum in the United Kingdom is of great assistance in planning lessons and learning plans, but the curriculum does not plan out the work for us. We therefore need to invest a lot

of time and effort into developing schemes of work that will suit the people we are going to teach For me it is a fantastic opportunity to employ our imagination and creativity to make lessons useful and interesting for children of different abilities It is why I wrote this book This book is a foundation course for Advanced Computer Studies and designed as a blueprint to teach users with a basic knowledge of computer science Computer science is a subject that combines the use of technology which is ICT Information Communication Technology and the creation of technology To use ICT the subject about how to use technology to communicate information more effectively we need to know how technology works Computing or computer science will create a generation of young people able to work at the forefront of technology change It is the umbrella term for the subject that comprises 3 elements computer science information technology and digital literacy It is helpful to think of these as the foundations applications and implications of digital technology The new focus on computer science will provides a well defined and rigorous academic discipline and a unique lens through which pupils can understand the world Children must therefore be taught computing if they are to be ready for tomorrow technology challenges Our ingenuity to invent new means of communicating with each other our very human compulsion to communicate have driven the technological innovations of the past two centuries however still a lot remain to be done with the arrival of quantum computing A more rigorous approach to computer science teaching will help compete across the full spectrum of digital industries This can only be achieved by equipping ourselves with the foundation skills knowledge and understanding of computing do the necessity to introduce computational thinking at school via the new national curriculum programmes of study and targets the 2014 national curriculum that introduces computing which will replace ICT
