pages 166–169

### Section 5.1

#### Mastering Concepts

**34.** Define the following terms.

**a.** frequency

Frequency is the number of waves that pass a given point per second.

**b.** wavelength

Wavelength is the shortest distance between equivalent points on a continuous wave.

**c.** quantum

A quantum is the minimum amount of energy that can be lost or gained by an atom.

**d.** ground state

An atom's ground state is its lowest allowable energy state.

**35.** Arrange the following types of electromagnetic radiation in order of increasing wavelength.

**a.** ultraviolet light

**b.** microwaves

**c.** radio waves

**d.** X rays

**d.** X rays, **a.** ultraviolet light, **b.** microwaves, **c.** radio waves

**36.** A gamma ray has a frequency of  $2.88 \times 10^{21}$  Hz. What does that mean?

$2.88 \times 10^{21}$  gamma-ray electromagnetic waves of this frequency pass a given point per second.

**37.** What is the photoelectric effect?

a phenomenon in which a metal emits electrons when light of a sufficient frequency shines on it

**38. Neon Sign** How does light emitted from a neon sign differ from sunlight?

The light from a neon sign contains only certain visible colors, while sunlight contains the full spectrum of colors.

**39.** Explain Planck's quantum concept as it relates to energy lost or gained by matter.

According to Planck, for a given frequency,  $\nu$ , matter can emit or absorb energy only in discrete quanta that are whole-number multiples of  $h\nu$ , where  $h$  is Planck's constant.

**40.** How did Einstein explain the photoelectric effect?

He proposed that photons must have a certain minimum energy level, or threshold, value to cause the ejection of a photoelectron.

**41. Rainbow** What are two differences between the red and green electromagnetic waves in a rainbow?

The red waves have a longer wavelength and a lower frequency.

**42. Temperature** What happens to the light emitted by a heated, glowing object as its temperature increases?

The color of the light changes as the object acquires more and more energy.

**43.** What are three deficiencies of the wave model of light related to light's interaction with matter?

The wave model does not explain the photoelectric effect, atomic emission spectra, and why matter emits different frequencies of light at different temperatures.

**44.** How are radio waves and ultraviolet waves similar? How are they different?

Both types of waves travel at the same speed in a vacuum,  $3.00 \times 10^8$  m/s. Radio waves have a longer wavelength and lower frequency than ultraviolet waves.

The 9th edition of Malone's *Basic Concepts of Chemistry* provides many new and advanced features that continue to address general chemistry topics with an emphasis on outcomes assessment. New and advanced features include an objectives grid at the end of each chapter which ties the objectives to examples within the sections, assessment exercises at the end of each section, and relevant chapter problems at the end of each chapter. A new Math Check allows quick access to the needed basic skill. The first chapter now includes brief introductions to several fundamental chemical concepts, and Chapter Synthesis Problems have been added to the end of each chapter to bring key concepts into one encompassing problem. Every concept in the text is clearly illustrated with one or more step-by-step examples. Making it Real essays have been updated to present timely and engaging real-world applications, emphasizing the relevance of the material they are learning. This edition continues the end-of-chapter Student Workshop activities to cater to the many different learning styles and to engage users in the practical aspect of the material discussed in the chapter.

**Manual of chemistry. A guide to lectures and laboratory work for beginners in chemistry. A text-book specially adapted for students of medicine, pharmacy, and dentistry** William Simon, 1901  
*A Laboratory Manual of Organic Chemistry for Students of the Medical Sciences* Hugh Cornelius Muldoon, 1927  
*Laboratory Manual for Principles of General Chemistry* J. A. Beran, Mark Lassiter, 2022-08-16

Laboratory Manual for Principles of General Chemistry 11th Edition covers two semesters of a general chemistry laboratory program. The material focuses on the lab experiences that reinforce the concepts that not all experimental conclusions are the same and depend on identifying an appropriate experimental procedure, selecting the proper apparatus, employing the proper techniques, systematically analyzing and interpreting the data, and minimizing inherent variables. As a result of good data, a scientific and analytical conclusion is made, which may or may not be right but is certainly consistent with the data. Experiments write textbooks; textbooks don't write experiments. A student's scientific literacy grows when experiences and observations associated with the scientific method are encountered. Further experimentation provides additional cause-effect observations leading to an even better understanding of the experiment. The 11th edition's experiments are informative and challenging while offering a solid foundation for technique, safety, and experimental procedure. The reporting and analysis of the data and the pre- and post-lab questions focus on the intuitiveness of the experiment. The experiments may accompany any general chemistry textbook and are compiled at the beginning of each curricular unit. An Additional Notes column is included in each experiment's Report Sheet to provide a space for recording observations and data during the experiment. Continued emphasis on handling data is supported by the Data Analysis section.

Clifford Mitchell, 1887      Laboratory Manual of Pharmaceutical Inorganic Chemistry Dr. Prashant D. Aragade, Dr. Niranjan S. Mahajan, Mr. Nilesh V. Salunkhe, Dr. A. N. Deshpande, 2023-10-02 We are pleased to present the Laboratory Manual of Pharmaceutical Inorganic Chemistry. This manual is prepared according to the PCI B Pharm course regulations 2014 and is divided into four sections: limit tests, identification tests, purity tests, and preparation of inorganic pharmaceuticals. The methods of all the experiments are taken from the latest editions of official books such as the Indian Pharmacopoeia and research papers so that the latest advancements in the methods or apparatus can be incorporated. The purpose of pharmaceutical inorganic chemistry practicals is to provide students with hands-on experience in understanding and applying the principles of inorganic chemistry to pharmaceutical applications. Through these practical sessions, students can learn how to prepare, analyze, and characterize inorganic pharmaceutical compounds, which are important in drug development, formulations, and quality control processes. These practicals also help students gain essential laboratory skills such as safely handling chemicals and using various analytical techniques, which are crucial for their future careers in the pharmaceutical industry or research. This manual is designed for outcome-based education, and each experiment is arranged in a uniform way with sections for practical significance, practical outcomes, PrOs mapping with course outcomes, theory, resources used, procedure, precautions, observations, results, conclusion, references, and synopsis questions. Each experiment offers an opportunity for students to perform practical work, allowing them to gain proficiency in effectively managing equipment, handling glassware, chemicals, and reagents, and writing reports. In addition, the questions at the end of the experiments help to enhance students' knowledge, which will be beneficial for them as they pursue higher studies. We acknowledge the help and cooperation of various persons in bringing out this manual. We are highly indebted to the authors of the books and articles mentioned in the references, which were a major source of information for writing this manual. We also thank the publishers, designers, and printers who worked hard to publish this manual in a timely manner. We hope that this manual will be helpful to students in understanding concepts, principles, and procedures. We wish you all the best.
