Endorsed by the United Nations UNESCO and the International Astronomical Union 2009 is designated as the International Year of Astronomy IYA and provides a year to celebrate and reflect on 400 years of changing perspectives of the universe In conjunction with the American Astronomical Society AAS the Astronomical Society of the Pacific ASP convened an IYA symposium and series of workshops at the AAS summer meeting in St Louis Missouri USA from May 31 to June 4 2008 During this conference astronomy and space science professionals gathered to share ideas and plans forge connections and collaborations and organize their efforts to make 2009 a singular year for advancing astronomy awareness and education This volume contains the content of the meeting plus an additional resource section It serves as a reference to aid those involved in the IYA as they make professional connections access resources and maximize their efforts to encourage the world's citizens to look up and discover anew the universe around us The Astronomical Society of the Pacific ASP founded in 1889 increases the understanding and appreciation of astronomy by engaging scientists educators enthusiasts and the public to advance science and science literacy Visit www.astrosociety.org for additional information regarding the ASP and how you can join the Society and support the cause of improving science literacy Publisher's website

Active Learning in College Science Joel J. Mintzes, Emily M. Walter, 2020-02-23 This book explores evidence based practice in college science teaching It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman's 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching In editing this book we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges 4 year liberal arts institutions comprehensive regional campuses and flagship research universities In keeping with Wieman's challenge our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences The content is structured as follows after an Introduction based on Constructivist Learning Theory Section I the practices we explore are Eliciting Ideas and Encouraging Reflection Section II Using Clickers to Engage Students Section III Supporting Peer Interaction through Small Group Activities Section IV Restructuring Curriculum and Instruction Section V Rethinking the Physical Environment Section VI Enhancing Understanding with Technology Section VII and Assessing Understanding Section VIII The book's final section IX is devoted to Professional Issues facing college and university faculty who choose to

adopt active learning in their courses The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years In this view learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base For most students that knowledge base is riddled with a host of na ve notions misconceptions and alternative conceptions they have acquired throughout their lives To a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances Clearly this prescription demands far more than most college and university scientists have been prepared for
