

Both booster and discharged battery should be treated carefully when using jumper cables. Follow the procedure outlined below, being careful not to cause sparks:

CAUTION: Departure from these conditions or the procedure below could result in: (1) Serious personal injury (particularly to eyes) or property damage from such causes as battery explosion, battery acid, or electrical burns; and/or (2) damage to electronic components of either vehicle.

Never expose battery to open flame or electric spark - batteries generate Hydrogen gas which is flammable and explosive.

Remove rings, watches, and other jewelry. Wear approved eye protection.

Do not allow battery fluid to contact eyes, skin, fabrics, or painted surfaces - fluid is a corrosive acid. Flush any contacted area with water immediately and thoroughly. Be careful that metal tools or jumper cables do not contact the positive battery terminal (or metal in contact with it) and any other metal on the car, because a short circuit could occur. Batteries should always be kept out of the reach of children.

1. Set parking brake and place automatic transmission in "PARK". Turn off the ignition, turn off lights, and all other electrical loads.
2. Check the built-in hydrometer. If it is clear or light yellow, replace the battery.
3. Only 12 volt batteries can be used to start the engine.
4. Attach the end of one jumper cable to the positive terminal of the booster battery and the other end to the remote positive terminal located under the red cover of the junction box on the right inner fender wall (refer to Figure 6D1-7). Connecting the jumper cable to the junction box terminal reduces the chances of the cable clamp contacting another metal surface causing a short circuit. Do not permit vehicles to touch each other as this could cause a ground connection and counteract the benefits of this procedure.
5. Attach one end of the remaining negative cable to the negative terminal of the booster battery, and the other end to a solid engine ground, or the exposed stud at the top of the strut tower of the vehicle being started (DO NOT CONNECT DIRECTLY TO THE NEGATIVE TERMINAL OF THE DEAD BATTERY).
6. Start the engine of the vehicle that is providing the jump start and turn off electrical accessories. Allowing the vehicle with the good battery to run a few minutes will increase the likelihood that the car with the discharged battery will start. Then start the engine in the car with the discharged battery.
7. When removing the jumper cables disconnect the negative cable from the engine that was jump started first.
8. Remove negative cable from the booster vehicle.
