WRITE THE MISSING EVIDENCE SENTENCES!

Under the splashing waves and into the darkness of the sea, there was a strange organism, clasping onto the rocks claimed by the ocean and struggling to find food to survive. However, above the villages of people and into the cloud forests on the mountains, there was a small animal, hiding under the huge leaves that fell from the tall trees, prospering with the other frogs. The discoveries of the rare octopod in "A Ghostly New Creature" and the tiny frog in "Tiptoeing Scientists" are different because of the methods to find these species and the characteristics of the specimens.

The discoveries of the ghostlike octopod and the Brazilian frog differ because of the different methods and technology used to find these specimens.

Your EVIDENCE should be 1-2 sentences

The use of high technology to find the octopod is unique compared to the method of examining leaves using the human's eyes to search for the frog. Both methods were appropriate to discover their rare species, but the vehicle to travel underwater and the screening of "leaf litter" demonstrates the contrasts between the two discoveries.

To add on to the reasons why the discoveries of the newly found octopod and frog are different, the rare species contrast because of the differing characteristics of the species.

Your EVIDENCE should be 1-2 sentences

The octopod's jelly-like pale body differs to the frog's colored poisonous body, showing the reader the species are not alike. This further proves the main point of the species from the two articles are unique.

Therefore, the method of discovering the specimens and the characteristics of the species are the reasons why the discoveries in "A Ghostly New Creature" and "Tiptoeing Scientists" are unique. The special octopod, staring into the camera of the vehicle that travelled deep into the ocean, was now discovered by a group of inquisitive scientists. The tiny frog, once singing with its family, was now grabbed and discovered by humans who were seeking for more knowledge. These discoveries were amazing to scientists around the world, but there are still many animals in the unknown, waiting for humanity to discover them.

The NAEP ... Technical Report ,1992 *Facing the Consequences* W.H. Schmidt,Curtis C. McKnight,Leland S. Cogan,Pamela M. Jakwerth,Richard T. Houang,2007-05-08 Facing the Consequences presents a perspective on US mathematics and science education that is developed from data gathered as part of the Third International Mathematics and Science Study TIMSS TIMSS is the most extensive and far reaching cross national comparative study of mathematics and science education ever attempted It includes comparing official curricula textbooks teacher practices and student achievements for many countries from 20 to 50 countries depending on the particular

comparison Thousands of official documents and textbooks were analyzed Thousands of teachers principals and other experts responded to survey questionnaires A sample of mathematics teachers in three countries had their lessons videotaped Hundreds of thousands of children in almost 50 countries were tested in mathematics and science This report presents a closer look at US mathematics and science education through careful examination of TIMSS data The authors believe this investigation shows how deceptive many often unquestioned assumptions about American education can be Drawing upon many new analyses not previously reported and integrating these with previous analyses of TIMSS data the authors develop and illustrate the argument that what happens to American students is the consequence of American beliefs that shape educational practice and the accretion of a myriad educational choices made in mathematics and science education

The National Assessment of Educational Progress (NAEP) 1992 reading assessment was administered to nationally representative samples of fourth, eighth, and twelfth grade students attending public and private schools and to state representative public school samples of fourth graders in 43 jurisdictions. Nearly 140,000 students were assessed in all.
