

Grade 11 Probability

In this chapter you:

- Revise the language of probability
- Use Venn diagrams showing two events to determine probabilities
- Identify independent and dependent events
- Use 2-way tables to determine probabilities of events happening
- Investigate the multiplication law for probability
- Use tree diagrams to determine probabilities of events happening
- Use Venn Diagrams showing three events to determine probabilities.

WHAT YOU LEARNED ABOUT PROBABILITY IN GRADE 10

In Grade 10 you covered the following probability concepts:

- *The use of probability models to compare the relative frequency of events with the theoretical probability*
- *The use of Venn diagrams to solve probability problems*
- *Rules for any two events A and B in sample space S:*
 - $P(A \text{ or } B) = P(A) + P(B) - P(A \text{ and } B)$
 - *A and B are mutually exclusive if $P(A \text{ and } B) = 0$*
 - *A and B are complementary if they are mutually exclusive*
And $P(A) + P(B) = 1$
Or $P(B) = P(\text{not } A) = 1 - P(A)$
Or $P(A) = P(\text{not } B) = 1 - P(B)$

THE LANGUAGE OF PROBABILITY

- ✓ *A statistical experiment is one in which there are a number of possible outcomes and we have no way of predicting which outcome will actually occur.*
- ✓ *A sample space is the set of all the possible outcomes in an experiment.*

Examinations Writing Exemplar Booklet, 1998 **Setting Consensus Goals for Academic Achievement** James

Pellegrino, Laurens Wise, Nambury Raju, 2014-10-13 This special issue is based on a workshop which began with a description and examination of the current National Assessment of Educational Progress NAEP standard setting model then looked to standard setting applications outside of education These applications included those that focus on human performance and the adequacy of human performance in these contexts raters were asked to focus on the knowledge and skills that underlie competent performance Researchers also examined applications that focus on the impact of environmental agents on life and the ecology in these cases raters began with the knowledge that more or less of a substance is better and as for NAEP the judgment task was to determine how good is good enough They wished to examine parallels in the objectives empirical grounding judgmental requirements and policy tensions for standard setting in NAEP and in other domains These papers

were commissioned to examine the current state of affairs and residual issues with respect to achievement level setting in NAEP and to help determine whether the models and methods used in other disciplines have useful application to education. It is important to note that the papers represent the authors' views not necessarily those of the committee or National Research Council. This issue and the workshop discussion point out a number of analogies between the objectives, requisite data, judgment requirements and policy issues for NAEP and other applications. The editors hope that this issue and wide distribution of these papers will prompt others to join in this interesting analysis and debate.

Fourth International Handbook of Mathematics Education M.A. (Ken) Clements, Berinderjeet Kaur, Thomas Lowrie, Vilma Mesa, Johan Prytz, 2024-11-19. This fourth international handbook discusses developments not recognized or dealt with fully in the first three Springer Mathematics Education handbooks and tackles controversial issues in the field. After starting with a provocative introductory chapter which asks whether controversy is a healthy feature of international mathematics education, the four following sections cover: a mathematics education in Asia, b the roles of theory in research and practice, c equity and social justice, and d curriculum and change. These themes are taken up in 28 chapters by 60 authoritative authors from all continents. Each of the four sections is structured on the basis of past, present and future aspects. Like the first three mathematics education handbooks, this handbook provides a very valuable resource for teachers, mathematics education practitioners and researchers, education policy makers and mathematicians, as well as graduate and undergraduate students.
