Yachting ,1998-10 *Cruising World ,2006-12* Biology of Skates David A. Ebert,James Sulikowski,2008-12-25 Skates have become a concern in recent years due to the preponderance of these elasmobranchs that are caught as bycatch or as a directed fishery This has raised concern because skates have life history characteristics that may make them vulnerable to over exploitation It was due to this concern that prompted Drs David Ebert and James Sulikowski to organize an international symposium on the Biology of Skates The aims and goals of the symposium were to bring together an international group of researchers to meet discuss perhaps develop collaborations and present their most recent findings The symposium was held over two days on 13 14 July 2006 in conjunction with the 22nd annual meeting of the American Elasmobranch Society in New Orleans LA A total of 31 authors from four countries contributed 16 papers that appear in this volume The papers are broadly arranged into four separate categories systematics and biogeography diet and feeding ecology reproductive biology and age and growth This is the first dedicated book on the biology of skates We hope that readers will find this volume of interest and that it helps encourage and stimulate future research into these fascinating fishes

and Emily Henrietta Woods In Nature's Realm is a companion volume to Layland's two previous titles A Perfect Eden Encounters by Early Explorers of Vancouver Island shortlisted for a BC Book Prize in two categories and The Land of Heart's Delight Early Maps and Charts of Vancouver Island shortlisted for the Bill Duthie Booksellers Choice Prize and for the City of Victoria Butler Book Prize

Science for All Peter J. Bowler, 2009-10-15 Recent scholarship has revealed that pioneering Victorian scientists endeavored through voluminous writing to raise public interest in science and its implications. But it has generally been assumed that once science became a profession around the turn of the century this new generation of scientists turned its collective back on public outreach. *Science for All* debunks this apocryphal notion. Peter J. Bowler surveys the books, serial works, magazines and newspapers published between 1900 and the outbreak of World War II to show that practicing scientists were very active in writing about their work for a general readership. *Science for All* argues that the social environment of early twentieth century Britain created a substantial market for science books and magazines aimed at those who had benefited from better secondary education but could not access higher learning. Scientists found it easy and profitable to write for this audience. Bowler reveals and because their work was seen as educational they faced no hostility from their peers. But when admission to colleges and universities became more accessible in the 1960s this market diminished and professional scientists began to lose interest in writing at the nonspecialist level. Eagerly anticipated by scholars of scientific engagement throughout the ages, *Science for All* sheds light on our own era and the continuing tension between science and public understanding.
