be gained before engineers and owners are prepared to fully rely on them This book compiled by RILEM TC 230 PSC is intended to assist efforts to successfully build the foundation for the full implementation of performance based approaches through the exchange of relevant knowledge and experience between researchers and practitioners worldwide

Corrosion of Steel in Concrete Luca Bertolini, Bernhard Elsener, Pietro Pedferri, Elena Redaelli, Rob B.

Polder, 2013-02-26 Steel reinforced concrete is used ubiquitously as a building material due to its unique combination of the high compressive strength of concrete and the high tensile strength of steel Therefore reinforced concrete is an ideal composite material that is used for a wide range of applications in structural engineering such as buildings bridges tunnels harbor quays foundations tanks and pipes To ensure durability of these structures however measures must be taken to prevent diagnose and if necessary repair damage to the material especially due to corrosion of the steel reinforcement The book examines the different aspects of corrosion of steel in concrete starting from basic and essential mechanisms of the phenomenon moving up to practical consequences for designers contractors and owners both for new and existing reinforced and prestressed concrete structures It covers general aspects of corrosion and protection of reinforcement forms of attack in the presence of carbonation and chlorides problems of hydrogen embrittlement as well as techniques of diagnosis monitoring and repair This second edition updates the contents with recent findings on the different topics considered and bibliographic references with particular attention to recent European standards This book is a self contained treatment for civil and construction engineers material scientists advanced students and architects concerned with the design and maintenance of reinforced concrete structures Readers will benefit from the knowledge tools and methods needed to understand corrosion in reinforced concrete and how to prevent it or keep it within acceptable limits *Manual de ortodoncia* Josep Maria Ustrell i

Engineering the Plant Factory for the Production of Biologics and Small-Molecule Medicines Domenico De

Martinis, Rosella Franconi, Eugenio Benvenuto, Edward P. Rybicki, Kazuhito Fujiyama, 2017-04-27 Plant gene transfer achieved in the early 80s paved the way for the exploitation of the potential of gene engineering to add novel agronomic traits and or to design plants as factories for high added value molecules For this latter area of research the term Molecular Farming was coined in reference to agricultural applications in that major crops like maize and tobacco were originally used basically for

pharma applications The concept of the green biofactory implies different advantages over the typical cell factories based on animal cell or microbial cultures already when considering the investment and managing costs of fermenters Although yield stability and quality of the molecules may vary among different heterologous systems and plants are competitive on a case to case basis still the plant factory attracts scientists and technologists for the challenging features of low production cost product safety and easy scale up Once engineered a plant is among the cheapest and easiest eukaryotic system to be bred with simple know how using nutrients water and light Molecules that are currently being produced in plants vary from industrial and pharmaceutical proteins including medical diagnostics proteins and vaccine antigens to nutritional supplements such as vitamins carbohydrates and biopolymers Convergence among disciplines as distant as plant physiology and pharmacology and more recently as omic sciences bioinformatics and nanotechnology increases the options of research on the plant cell factory Farming for Pharming biologics and small molecule medicines is a challenging area of plant biotechnology that may break the limits of current standard production technologies The recent success on Ebola fighting with plant made antibodies put a spotlight on the enormous potential of next generation herbal medicines made especially in the name of the guiding principle of reduction of costs hence reduction of disparities of health rights and as a tool to guarantee adequate health protection in developing countries
