Plants and the Human Brain David O. Kennedy,2014-01-09 We re all familiar with the idea that plant derived chemicals can have an impact on the functioning of the human brain Most of us reach for a cup of coffee or tea in the morning many of us occasionally eat some chocolate some smoke a cigarette or take an herbal supplement and some people use illicit drugs We know a great deal about the mechanisms by which the psychoactive components of these various products have their effects on human brain function but the question of why they have these effects has been almost totally ignored This book sets out to describe not only how in terms of pharmacology or psychopharmacology but more importantly why plant and fungus derived chemicals have their effects on the human brain The answer to this last question resides in part with the terrestrial world s two dominant life forms the plants and the insects and the many ecological roles the secondary metabolite plant chemicals are trying to play for instance defending the plant against insect herbivores whilst attracting insect pollinators The answer also resides in the intersecting genetic heritage of mammals plants and insects and the surprising biological similarities between the three taxa In particular it revolves around the close correspondence between the brains of insects and humans and the intercellular signaling pathways shared by plants and humans *Plants and the Human Brain* describes and discusses both how and why phytochemicals affect brain function with respect to the three main groups of secondary metabolites the alkaloids which provide us with caffeine a host of poisons a handful of
