

- Hook the release tool into the release point, arrow.

- Forcefully pull the release tool up against the resistance until you notice a marked increase in the resistance and the parking brake releases audibly.

Have the malfunction corrected

If the parking brake has been released manually in response to a malfunction, only technicians can return it to operation.

Have the malfunction corrected by your service center. ◀

After a power failure

Only put the parking brake into operation after a power failure

The parking brake should only be put into operation again if it was manually released due to an interruption in the supply of electrical power. Otherwise, it cannot be ensured that the parking brake will function properly. ◀

Putting the parking brake into operation

- Switch on the ignition.

- Press the switch with the brake depressed or transmission position P engaged.

It may take several seconds for the brake to be put into operation. Any sounds associated with this are normal.

PARK

The indicator lamp in the instrument cluster goes out as soon as the parking brake is ready for operation.

Automatic Hold

The concept

This system assists the driver by automatically setting and releasing the parking brake, such as when moving in stop-and-go traffic.

The vehicle is automatically held in place when it is stationary.

On inclines, the system prevents the vehicle from rolling backward when driving away.

For your safety

Automatic Hold is deactivated automatically and the parking brake is set when:

- ▶ The engine is switched off.
- ▶ A door is opened and the driver's safety belt is unbuckled.
- ▶ The vehicle is braked to a standstill with the parking brake while driving.
