Sharma, 2019-01-01 NA **Forensic Engineering** Stephen E. Petty, 2017-12-19 A comprehensive resource that builds a bridge between engineering disciplines and the building sciences and trades. Forensic Engineering Damage Assessments for Residential and Commercial Structures provides an extensive look into the world of forensic engineering. With a focus on investigations associated with insurance industry claims, the book describes methodologies for performing insurance related investigations including the causation and origin of damage to residential and commercial structures and/or unhealthy interior environments and adverse effects on the occupants of these structures. Edited by an industry expert with more than 30 years of experience and authors with more than 100 years of experience in the field, the book takes the technical aspects of engineering and scientific principles and applies them to real world issues in a non technical manner. It provides readers with the experiences investigation methodologies and investigation protocols used in and derived from completing thousands of forensic engineering investigations. It begins with providing a baseline methodology for completing forensic investigations and closes with advice on testifying as an expert witness. Much of what must be known in this field is not learned in school but is based upon experience since recognizing the cause of a building system failure requires a blending of skills from the white collar and blue collar worlds. Such knowledge can be vital since failures e.g. water entry often result from construction activities completed out of sequence. This book details proven methodologies based on over 7 000 field investigations methodologies which can be followed by both professionals and laymen alike. Flood and Coastal Erosion Risk Management Edmund Penning-Rowsell, Sally Priest, Dennis Parker, Joe Morris, Sylvia Tunstall, Christophe Viavattene, John Chatterton, Damon Owen, 2014-01-03 A new Multi-Coloured Manual. This book is a successor to and replacement for the highly respected manual and handbook on the benefits of flood and coastal risk management produced by the Flood Hazard Research Centre at Middlesex University UK with support from Defra and the Environment Agency. It builds upon a previous book known as the multi-coloured manual 2005 which itself was a synthesis of the blue 1977, red 1987, and yellow manuals 1992. As such, it expands and updates this work to provide a manual of assessment techniques of flood risk management, benefits, indirect benefits, and coastal erosion risk management. It has three key aims: First, it provides methods and data which can be used for the practical assessment of schemes and policies. Secondly, it describes new research to update the data and improve techniques. Thirdly, it explains the limitations and complications of Benefit Cost Analysis to guide decision making on investment in river and coastal risk management schemes.
