web jan 10 2022 the most stressed part of the crane hook is the curved inner surface this surface is considered critical in terms of strength the goal of this paper is to select a suitable crane hook

analysing crane hook of different cross sections and springer - Jan 30 2023

web analysis of these hooks to determine the areas with high stress i e failure points and those with low stresses these are potential points for material removal weight reduction and reduced costs

*finite element stress analysis of crane hook* - Sep 25 2022

web bending stresses combined with tensile stresses weakening of hook due to wear plastic deformation due to overloading and excessive thermal stresses are some of the other reasons for failure hence continuous use of crane hooks may increase the magnitude of these stresses and eventually result in failure of the hook
