The distribution of completion time for the large puzzle was approximately normal with mean 180 minutes and standard deviation 40 minutes.

Approximately what percent of the participants had finishing times greater than Shalise's for each puzzle?

- (A) 16% on the small puzzle and 16% on the large puzzle  
 (B) 16% on the small puzzle and 84% on the large puzzle

Quantitative Data Analysis Willem Mertens, Amedeo Pugliese, Jan Recker, 2016-09-29. This book offers postgraduate and early career researchers in accounting and information systems a guide to choosing, executing, and reporting appropriate data analysis methods to answer their research questions. It provides readers with a basic understanding of the steps that each method involves and of the facets of the analysis that require special attention. Rather than presenting an exhaustive overview of the methods or explaining them in detail, the book serves as a starting point for developing data analysis skills; it provides hands-on guidelines for conducting the most common analyses and reporting results and includes pointers to more extensive resources. Comprehensive yet succinct, the book is brief and written in a language that everyone can understand, from students to those employed by organizations wanting to study the context in which they work. It also serves as a refresher for researchers who have learned data analysis techniques previously but who need a reminder for the specific study they are involved in.
