

Cerebral Vascular Accident (CVA)

I. Data Collection

History of Present Problem:

John Green is a 55-year-old male who was at work when he had sudden onset of right-sided weakness, right facial droop, and difficulty speaking (dysarthric speech). He was transported to the emergency department (ED) where these symptoms persisted. During transport, he had increased agitation and became confused to place and time. It has been 30 minutes from the onset of his neurologic symptoms when he presents to the ED.

Personal/Social History:

John lives with his wife in their own home in a small rural community. He owns his own hardware store where he remains active and involved in the day-to-day operations. John's wife is with him along with his son who also works in the hardware store. His wife insists on being by his side and talking to John despite John's frustration in not being able to answer her questions. John has been trying to quit smoking over the past week and began using a nicotine patch. John has been complaining of pain on the right foot for the past week according to his wife.

What data from the histories is important & RELEVANT, therefore it has clinical significance to the nurse?

RELEVANT Data from Present Problem:	Clinical Significance:
Sudden onset of right-sided weakness, right facial droop, and difficulty speaking (dysarthric speech)	All of these symptoms are reflecting acute neurologic changes that are due to disruption in cerebral blood flow either because of embolism or hemorrhagic event. The location of the affected area will determine the type and severity of symptoms. <i>ABC – Are we are able to localize what side of the cerebral hemisphere this CVA is taking place on?</i> It is clearly the LEFT cerebral hemisphere because of the right-sided motor deficits. This is a good time to highlight the relevance of <i>ABC</i> and remember the oxygen callouts and what this does!
During transport, he had increased agitation and confusion to place and time	All of these symptoms are reflecting acute neurologic changes that are due to disruption in cerebral blood flow either because of embolism or hemorrhagic event and is a classic RED FLAG because it is a change that is reflecting a worsening status.
It has been 30 minutes from the onset of neurologic symptoms when he presents to the ED	Has been only 30 minutes since onset of neuro symptoms. Is now in ED and if not contraindicated, he is a candidate for thrombolytic therapy such as tPA that can re-establish cerebral blood flow and limit severity of CVA deficits dramatically. TIME IS BRAIN! as it is estimated that millions of neurons are lost every minute that tPA therapy is delayed!
RELEVANT Data from Social History:	Clinical Significance:
His wife insists on being by his side and talking to John despite John's frustration in not being able to answer her questions	<i>The wife's intrusive ABC is a problem. Will need further assessment.</i> Regarding his speech, is he expressive or receptive aphasia or both? This is reflecting EXPRESSIVE aphasia
Nicotine patch use	<i>In the patch still on him? . . . May irritate BB and should be removed during the acute episode for now. The nurse needs to find it!</i>
pain on the right foot for the past week	He needs to take his shoes off and perform a skin and joint assessment. Think gout or potential for skin breakdown. He is a diabetic and clustering these 2 pieces of clinical data requires the nurse to assess this once the dust settles with his primary problem.

Practical Implementation Science Bryan J. Weiner, Cara C. Lewis, Kenneth Sherr, 2022-03-18 Prose Award Finalist for Nursing and Allied Health Services Category Awarded First Place in the AJN 2022 Book of the Year Awards in the Community Public Health Category Practical Implementation Science Moving Evidence Into Action provides the ideal text for a master's level implementation science course. It fills an important gap by focusing on building skills among trainees whose careers will focus more on implementation practice than research and prepares them to partner with scientists to enhance effective implementation in public health and health systems. Most importantly, my students feel that the book is helping make a topic that can be experienced as complex very accessible. Donna Shelley MD MPH Professor Dept Public Health Policy and Management Director Global Center for Implementation Science NYU School of Global Public Health Practical Implementation Science is designed for graduate health professional and advanced undergraduate students who want to master the steps of using implementation science to improve public health. Engaging and accessible, this textbook demonstrates how to implement evidence-based practices effectively through use of relevant theories, frameworks, models, tools, and research findings. Additional real-world case studies across public health, global health, and health policy provide essential context to the major issues facing implementation domestically and globally, with consideration of communities in low to middle income countries (LMIC). The textbook is organized around the steps involved in planning, executing, and evaluating implementation efforts to improve health outcomes in communities. Coverage spans assessing the knowledge-practice gap, selecting an evidence-based practice (EBP) to reduce the gap, assessing EBP fit and adapting the EBP, assessing barriers and facilitators of implementation, engaging stakeholders, creating an implementation structure, implementing the EBP, and evaluating the EBP effort. Each chapter includes a how-to approach to conducting the task at hand. The text also addresses the practical importance of implementation science through disseminating EBPs, scaling up EBPs, sustaining EBPs, and deimplementing practices that are no longer effective. All chapters include learning objectives and summaries with emphasized Key Points for Practice, Common Pitfalls in Practice, and discussion questions to direct learning and classroom discussion. Fit for students of public health, health policy, nursing, medicine, mental health, behavioral health, allied health, and social work, Practical Implementation Science seeks to bridge the gap from scientific evidence to effective practice. Key Features: Soup to Nuts Approach: Distills the steps to selecting, adapting, implementing, evaluating, scaling up, and sustaining evidence-based practices. Expert Insight: Editors and chapter authors bring years of experience from leading implementation programs and interventions. Multidisciplinary Focus: Utilizes cases and research findings.

Hope for the Oppressor Patrick Oden, 2019-07-26 The liberating work of God calls the oppressed out of oppression and the oppressor out of oppressing The challenge in seeking a thorough liberation of oppressors is to help them understand their need for freedom and how to seek this freedom in their own contexts Patrick Oden provides a holistic biblical historical and theological analysis that diagnoses the underlying motivations and inclinations that lead to oppression Part one addresses the context of oppression in which most participants in oppression do not actively seek to harm others but are caught up in systems that tend toward the diminishment of others Part two examines the biblical and early Christian response to oppression discovering a thread that avoids condemning participation in society generally while also cautioning the people of God about being co opted by society Part three discusses how oppressors can withdraw from oppression through a constructive analysis of four contemporary theologians Wolhart Pannenberg J rgen Moltmann Sarah Coakley and Jean Vanier each of whom contributes to a widening vision of liberated and liberating life in which the once oppressed and former oppressor can find peace together in community
