The Science of Life in Aristotle and the Early Peripatetics, 2024-12-30 This volume of fourteen essays explores the science of life in Aristotle and the Early Peripatetics. Theophrastus and the Physical Problems in its various dimensions: how the study of the soul contributes to the foundation of the science of perishable life; what is the program of this science and its main explanatory strategies; whether it is the explanation of natural generation or the relationship of the animal to its surroundings. But the authors also explore what might be for Aristotle the unity of life: not only that of animals and plants but also that of celestial bodies and the Prime Mover.

Imageries optiques non conventionnelles pour la biologie Corinne Fournier, Olivier Haeberlé, 2023-01-20 L'imagerie optique des systèmes biologiques a connu ces dernières années des développements spectaculaires, délivrant une quantité et une qualité d'informations qui il y a une vingtaine d'années encore relevaient du rêve pour les physiciens, les biologistes ou les médecins. Les systèmes d'imageries non conventionnelles permettent d'accéder des grandeurs physiques, opacité, phase, indice optique, propriété de polarisation d'une onde ou composition chimique d'un objet non accessibles aux systèmes de mesure conventionnels. Pour cela, ces systèmes utilisent des montages optiques particuliers et des traitements numériques spécifiques des images permettant la reconstruction de grandeurs physiques. On parle également d'imagerie computationnelle. Cet ouvrage présente diverses modalités d'imageries non conventionnelles développées pour le domaine biomédical: imagerie par analyse de front d'onde, holographie, tomographie numérique, nanoscopie optique, endoscopie et imagerie monodecteur. Pour chaque modalité, les montages et les algorithmes de reconstruction sont présentés.
