Kennedy, 2018-10-04 Of the many issues facing special education and general education today it is difficult to imagine one more important or timely than response to intervention RTI Almost overnight RTI has become standard practice across the nation Unfortunately RTI remains ill defined falls far short of its evidence based practice goal is almost invariably misused and often results in more harm than good Nevertheless as a conceptual framework RTI has great potential for ensuring that students with disabilities receive appropriate evidence based

instruction The mission of this handbook is to present a comprehensive and integrated discussion of response to intervention RTI and its relation to multi tiered systems of support MTSS in both special education and general education Although the two terms are currently used interchangeably distinct differences exist between them Therefore chapters are dedicated to distinguishing the two concepts RTI and MTSS and describing each one s unique role in both general and special education In addition the authors recommend a third term Multi Tiered Instruction to differentiate the practices related to the purpose of the specific intervention

Predicting Math

Achievement Using the SMALSI as a Measure of Motivation and Learning and Study Strategy Use David Andrew Kahn, 2012 The purpose of this study was to evaluate the School Motivation and Learning Strategies Inventory SMALSI and the AIMSweb Math Winter Benchmarks to determine if they could be used by school personnel to identify students at risk of low performance in mathematics Previous research shows strategy use enhances math achievement and math fluency predicts math achievement It was thought that if scores on the SMALSI and AIMSweb Math Winter Benchmarks were found to correlate to scores on the math subtests of the Woodcock Johnson Tests of Achievement WJ III and the TAKS Math Test then this would provide evidence for using the SMALSI and AIMSweb Benchmarks for identifying students at risk of learning

problems in mathematics Participants n 176 completed the AIMSweb Math Winter Benchmarks the SMALSI the math subtests of the WJ III and the TAKS Math Test None of the scales of the SMALSI were statistically significant predictors of the variance in performance on the WJ III when used individually The Writing Research Skills scale explained the most variance as an individual predictor When all nine scales were used as predictors they explained a statistically significant portion of the variance on the WJ III with the Reading Comprehension Strategies scale being the most significant predictor The level of learning and study strategy use predicted more of the variance in performance on the WJ III for students in Fifth Grade than for students in Third and Fourth Grade even though the level of strategy use remained the same across the three grade levels In general females reported using more learning and study strategies and more anxiety during test taking situations while males reported lower academic motivation and more attention concentration difficulties Finally the AIMSweb Math Winter Benchmarks explained a statistically significant portion of the variance in performance on the WJ III and the TAKS Math Test Based on these results the SMALSI would be a useful screening tool for identifying students who require explicit instruction of learning and study strategies designed to enhance math achievement and the AIMSweb Math Winter Benchmarks would be a useful screening tool for identifying students at risk of academic difficulties in mathematics
