Air Force and Space Digest ,1970-07 **Space Warfare** Nordin Yusof,1999 **US Presidents and the Militarization of Space, 1946-1967** Sean N. Kalic,2012-05-02 In the clash of ideologies represented by the Cold War even the heavens were not immune to militarization Satellites and space programs became critical elements among the national security objectives of both the United States and the Soviet Union According to US Presidents and the Militarization of Space 1946 1967 three American presidents in succession shared a fundamental objective of preserving space as a weapons free frontier for the benefit of all humanity Between 1953 and 1967 Presidents Eisenhower Kennedy and Johnson all saw nonaggressive military satellite development as well as the civilian space program as means to favorably shape the international community's opinion of the scientific technological and military capabilities of the United States Sean N Kalic's reinterpretation of the development of US space policy based on documents declassified in the past decade demonstrates that a single vision for the appropriate uses of space characterized American strategies across parties and administrations during this period Significantly Kalic's findings contradict the popular opinion that the United States sought to weaponize space and calls into question the traditional interpretation of the space race as a simple action reaction paradigm Indeed beyond serving as a symbol and ambassador of US technological capability its satellite program provided the United States with advanced nonaggressive military intelligence gathering platforms that proved critical in assessing the strategic nuclear balance between the United States and the Soviet Union It also aided the three administrations in countering the Soviet Union's increasing international prestige after its series of space firsts beginning with the launch of Sputnik in 1957

Beyond Horizons David N. Spires,1997 *Sabre Rattling in Space* Ahmad Khan,Eligar Sadeh,2024-12-13 This book offers historical and theoretical context of the path followed by States from space militarization to weaponization and deconstructs traditional security paradigm myths to prove that a paradigm shift has been brought because of deadly space weapons developed by major space powers It reconciles that the strategic distrust between two leading space competitors U S and China has prompted them to pursue counter space capabilities The ripple effect of this troubling relation in space is not limited at the global level but has witnessed a trickledown effect on regional security In relation to this the book offers details of the Indian space program including its military space ambitions and provides information about Pakistan's objectives in space It offers an overview of challenges to international space governance and how the structural flaws help states to aggressively follow a path toward space weaponization Additionally it discusses the UN negotiating arms control measures in space and the politics of states not to negotiate prevention of an arms race in outer space The book is a useful contribution to space security from both traditional and contemporary approaches covering history theory and application It

provides an academic as well as practical approach carrying appeal for professionals experts opinion makers industry academics teachers policy makers politicians and masses from other walks of life who are interests in space security **Air University Library Index to Military Periodicals** ,1970 **Air Force Space Command** United States. Air Force Space Command. CE.,1999 **Space Warfare** John J. Klein,2012-09-10 This new study considers military space strategy within the context of the land and naval strategies of the past Explaining why and how strategists note the similarities of space operations to those of the air and naval forces this book shows why many such strategies unintentionally lead to overemphasizing the importance of space based offensive weaponry and technology Counter to most U S Air Force doctrines the book argues that space based weapons don t imbue superiority It examines why both air and naval strategic frameworks actually fail to adequately capture the scope of real world issues regarding current space operations Yet by expanding a naval strategic framework to include maritime activities which includes the interaction of land and sea the breadth of issues and concerns regarding space activities and operations can be fully encompassed Commander John Klein United States Navy uses Sir Julian Corbett s maritime strategy as a strategic springboard while observing the salient lessons of other strategists including Sun Tzu Clausewitz Jomini and Mao Tse tung to show how a space strategy and associated principles of space warfare can be derived to predict concerns develop ideas and suggest policy not currently recognized This book will be of great interest to all students and scholars of military and strategic studies and to those with an interest in space strategy in particular **The Development of Air Force Undergraduate Space Training** Michael Harvey Levy,1990 **Air University Abstracts of Research Reports** ,1986 *Air University Review* ,1982-03 [Sustained Space Superiority](#) Larry J. Schaefer,2002 The increasing importance of space for U S national security requires the nation to protect its interests by sustaining a position of space superiority The forces of globalization are forcing the United States to move away from its historical stance of maintaining space as a sanctuary toward the concept of using weapons in space The United States must prepare sufficient bridges to make the transition to using weapons in space in view of psychological impediments and treaty obligations which must be orchestrated to support and protect the current uses of space while preparing for eventual conflict in space This study examines a framework for organizing U S space activities into a coherent national strategy sustained space superiority It analyzes several dimensions that affect a national strategy for U S space superiority including its military intelligence and economic components This national strategy for space superiority will require strong leadership and public support because this strategy will be expensive and involve a long term commitment While the United States enjoys space superiority today this advantage will be lost if the nation does not take the necessary steps to sustain it
