**The Blame Machine** Robert B. Whittingham,2004 The Blame Machine describes how disasters and serious accidents result from recurring but potentially avoidable human errors It shows how such errors are preventable because they result from defective systems within a company From real incidents you will be able to identify common causes of human error and typical system deficiencies that have led to these errors On a larger scale you will be able to see where in the organisational or management systems failure occurred so that you can avoid them The book also describes the existence of a blame culture in many organisations which focuses on individual human error whilst ignoring the system failures that caused it The book shows how this blame culture has in the case of a number of past accidents dominated the accident enquiry process hampering a proper investigation of the underlying causes Suggestions are made about how progress can be made to develop a more open culture in organisations both through better understanding of human error by managers and through increased public awareness of the issues The book brings together documentary evidence from recent major incidents from all around the world and within the Rail Water Aviation Shipping Chemical and Nuclear industries

the most tangible products of technology called technical artefacts and then builds step wise towards considering those artefacts within their context of use and ultimately as embedded in encompassing sociotechnical systems that also include humans as operators and social rules like legislation Philosophical characterisations are given of technical artefacts their context of use and of sociotechnical systems Analyses are presented of how technical artefacts are designed in engineering and what types of technological knowledge is involved in engineering And the issue is considered how engineers and others can or cannot influence the development of technology These characterisations are complemented by ethical analyses of the moral status of technical artefacts and the possibilities and impossibilities for engineers to influence this status when designing artefacts and the sociotechnical systems in which artefacts are embedded The running example in the book is aviation where aeroplanes are examples of technical artefacts and the world aviation system is an example of a sociotechnical system Issues related to the design of quiet aeroplane engines and the causes of aviation accidents are analysed for illustrating the moral status of designing and the role of engineers therein Table of Contents Technical Artefacts Technical Designing Ethics and Designing Technological Knowledge Sociotechnical Systems The Role of Social Factors in Technological Development Ethics and Unintended Consequences of Technology Aviation Automation Charles E. Billings, 2018-01-29 The advent of very compact very powerful digital computers has made it possible to automate a great many processes that formerly required large complex machinery Digital computers have made possible revolutionary changes in industry commerce and transportation This book an expansion and revision of the author s earlier technical papers on this subject describes the development of automation in aircraft and in the aviation system its likely evolution in the future and the effects that these technologies have had and will have on the human operators and managers of the system It suggests concepts that may be able to enhance human machine relationships in future systems The author focuses on the ability of human operators to work cooperatively with the constellation of machines they command and control because it is the interactions among these system elements that result in the system s success or failure whether in aviation or elsewhere Aviation automation has provided great social and technological benefits but these benefits have not come without cost In recent years new problems in aircraft have emerged due to failures in the human machine relationship These incidents and accidents have motivated this inquiry into aviation automation Similar problems in the air traffic management system are predicted as it becomes more fully automated In particular incidents and accidents have occurred which suggest that the principle problems with today s aviation automation are associated with its complexity coupling autonomy and opacity These problems are not unique to aviation they exist in other highly dynamic domains as well The author suggests that a different approach to automation called human centered automation offers potential benefits for system performance by enabling a more cooperative human machine relationship in the control and management of aircraft and air traffic **Air Line Pilot** ,1996 Airline Pilot. Basic Knowledge Facundo Conforti, We begin part of our aviation career flying completely

solo or with an instructor assigned to a specific task As flight hours accumulate our cockpit begins to be shared with colleagues friends instructors etc But after a long path of experience the time comes to share a professional cockpit with another pilot as part of a working team This is where novice or inexperienced pilots who lack knowledge and training in a shared cockpit often face difficulties in performing routine tasks Flying in a shared cockpit not only presents a challenge for any pilot who has developed their career flying solo but also for airlines that foresee this possibility and invest resources in training pilots to bring them to the highest safety standards Considering this a pilot with knowledge and mastery of shared cockpit techniques and airline flight resources represents a competitive advantage when applying for a job with an airline as opposed to pilots who lack these tools Learning to fly in a shared cockpit as in airline operations involves getting to know your coworker forming a team where tasks can be shared roles distributed and being objective and self critical without losing the professionalism and cordiality between colleagues Flying in an airline environment is teamwork where there will be a leader and an advisor roles that will continuously shift challenging pilots to adapt Flying for an airline is more than just flying It is about sharing assisting correcting helping cooperating and pushing together toward the same goal achieving a successful and safe flight Let us explore all the tools necessary to make our next shared cockpits a safe and professional environment where airline flight operations are more than just that

David Moriarty, 2014-12-30 Practical Human Factors for Pilots bridges the divide between human factors research and one of the key industries that this research is meant to benefit civil aviation Human factors are now recognized as being at the core of aviation safety and the training syllabus that flight crew trainees have to follow reflects that This book will help student pilots pass exams in human performance and limitations successfully undergo multi crew cooperation training and crew resource management CRM training and prepare them for assessment in non technical skills during operator and license proficiency checks in the simulator and during line checks when operating flights Each chapter begins with an explanation of the relevant science behind that particular subject along with mini case studies that demonstrate its relevance to commercial flight operations Of particular focus are practical tools and techniques that students can learn in order to improve their performance as well as training tips for the instructor Provides practical evidence based guidance on issues often at the root of aircraft accidents Uses international regulatory material Includes concepts and theories that have practical relevance to flight operations Covers relevant topics in a step by step manner describing how they apply to flight operations Demonstrates how human decision making has been implicated in air accidents and equips the

reader with tools to mitigate these risks Gives instructors a reliable knowledge base on which to design and deliver effective training Summarizes the current state of human factors training and assessment *Pilot Mental Health Assessment and Support* Robert Bor, Carina Eriksen, Margaret Oakes, Peter Scragg, 2016-12-08 The book presents an authoritative comprehensive and practical guide to modern evidence based practice in the field of mental health assessment treatment and care It features a range of contributions from aviation related organisations including different skills and methods that can be used for the clinical assessment of pilots Human-automation teamwork Åsa Svensson, 2020-04-07 This dissertation explores the topic of human automation teamwork in Air Traffic Control ATC ATC is a high stakes environment where complex automation is being introduced while the human operator has the legal responsibility With increasing demands on productivity in various industries as also in ATC automation is introduced for efficiency maintaining safety and to keep the workload of the human operator within acceptable limits However previous research has shown that automation may cause negative effects on the human operator and performance such as forcing the operator out of the control loop which might lead to problems or confusion Previous research suggests a need for strengthening human automation collaboration where automation is seen as a team member to keep the operator in the loop In order to achieve such teamwork the design of the automation needs to be human centred i e that the automation is designed for the underlying need of the operator The aim of this dissertation is to explore teamwork in ATC from several angles to understand how the air traffic controllers are working in current ATC environments and how automation could be designed to support human automation teamwork The included studies rely on interviews simulations and questionnaires all with operational air traffic controllers as participants The results indicate that for both human human teamwork and human automation teamwork teamwork factors such as adaptability and mutual performance monitoring knowing what the other team members are doing are important for the work performance in current ATC environments where mutual performance monitoring is especially important during stressful situations When designing automation lessons learned from human human teamwork should be considered The work within the scope of this dissertation identifies and concerns two human automation teamwork aspects boundary awareness and implicit communication These are proposed to support the operator s knowledge about the automation and the communication flow between the operator and the automation Boundary awareness is the operator s knowledge of the automation s abilities its boundaries what it can or cannot manage and about consequences if it would go outside of these boundaries Implicit communication is the unspoken or implied small cues that the operator and the automation can use to communicate with each other It is proposed that implicit communication can be based on the work patterns of the operator The knowledge gained through the work in this dissertation can be used as a foundation for further research and design of automation regarding operator knowledge about the automation boundaries and the communication within the team Denna avhandling utforskar teamwork mellan m nniska och automation inom flygtrafikledning Flygtrafikledning r en h griskmilj d r
