| LEVEL (QUALITY) OF EVIDENCE† | |
|--|------------------------|
| LEVEL A | |
| <ul style="list-style-type: none"> High-quality evidence‡ from more than 1 RCT Meta-analysis of high-quality RCTs One or more RCTs corroborated by high-quality registry studies | |
| LEVEL B-R | (Randomized) |

| LEVEL C-LD | Limited Data |
| <ul style="list-style-type: none"> Randomized or nonrandomized observational or registry studies with limitations of design or execution Meta-analysis of such studies Physiological or mechanistic studies in human subjects | |
| LEVEL C-EO | Expert Opinion |
| Consensus of expert opinion based on clinical experience | |

COB and LOE are determined independently (only COB may be paired with any LOE).

A recommendation with LOE C does not imply that the recommendation is weak. Many important clinical questions addressed in guidelines do not lend themselves to clinical trials. Although RCTs are desirable, there may be a very clear clinical consensus that a particular test or therapy is useful or effective.

* The outcome or result of the intervention should be specified (an improved clinical outcome or increased diagnostic accuracy or incremental prognostic information).

† For comparative effectiveness recommendations (COB I and for LOE A and B only), studies that support the use of comparative verbs should involve direct comparisons of the treatments or strategies being evaluated.

‡ The method of assessing quality is evolving, including the application of standardized, widely used, and preferably validated evidence grading tools; and for systematic reviews, the incorporation of an Evidence Review Committee.

COB indicates Class of Recommendation; EO, expert opinion; LD, limited data; LOE, Level of Evidence; NR, nonrandomized; R, randomized; and RCT, randomized controlled trial.
