Whittingham,2004-02-18 The Blame Machine describes how disasters and serious accidents result from recurring but potentially avoidable human errors It shows how such errors are preventable because they result from defective systems within a company From real incidents you will be able to identify common causes of human error and typical system deficiencies that have led to these errors On a larger scale you will be able to see where in the organisational or management systems failure occurred so that you can avoid them The book also describes the existence of a blame culture in many organisations which focuses on individual human error whilst ignoring the system failures that caused it The book shows how this blame culture has in the case of a number of past accidents dominated the accident enquiry process hampering a proper investigation of the underlying causes Suggestions are made about how progress can be made to develop a more open culture in organisations both through better understanding of human error by managers and through increased public awareness of the issues The book brings together documentary evidence from recent major incidents from all around the world and within the Rail Water Aviation Shipping Chemical and Nuclear industries Barry Whittingham has worked as a senior manager design engineer and consultant for the chemical nuclear offshore oil and gas railway and aviation sectors He developed a career as a safety consultant specializing in the human factors aspects of accident causation He is a member of the Human Factors in Reliability Group and a Fellow of the Safety and Reliability Society *Federal Aviation*
