Patrick Neumann, Ian Noy, 2021-05-17 This book presents the proceedings of the 21st Congress of the International Ergonomics Association IEA 2021 held online on June 13-18 2021. By highlighting the latest theories and models as well as cutting edge technologies and applications and by combining findings from a range of disciplines including engineering, design, robotics, healthcare, management, computer science, human biology and behavioral science, it provides researchers and practitioners alike with a comprehensive, timely guide on human factors and ergonomics. It also offers an excellent source of innovative ideas to stimulate future discussions and developments aimed at applying knowledge and techniques to optimize system performance while at the same time promoting the health, safety and wellbeing of individuals. The proceedings include papers from researchers and practitioners, scientists and physicians, institutional leaders, managers and policy makers that contribute to constructing the Human Factors and Ergonomics approach across a variety of methodologies, domains and productive sectors. This volume includes papers addressing the following topics: Transport Ergonomics and Human Factors Practitioner Case Studies, Human Factors in Robotics Manufacturing, Agriculture, HF/E in Supply Chain Design and Management, Aerospace Building and Construction.      *Human Performance on the Flight Deck* Don Harris, 2016-12-05 Taking an integrated systems approach to dealing exclusively with the human performance issues encountered on the flight deck of the modern airliner, this book describes the interrelationships between the various application areas of human factors, recognising that the human contribution to the operation of an airliner does not fall into neat pigeonholes. The relationship between areas such as pilot selection, training, flight deck design and safety management is continually emphasised within the book. It also affirms the upside of human factors in aviation, the positive contribution that it can make to the industry and avoids placing undue emphasis on when the human component fails. The book is divided into four main parts. Part one describes the underpinning science base with chapters on human information processing, workload, situation awareness, decision making, error and individual differences. Part two of the book looks at the human in the system, containing chapters on pilot selection, simulation and training, stress, fatigue and alcohol and environmental stressors. Part three takes a closer look at the machine, the aircraft, beginning with an examination of flight deck display design followed by chapters on aircraft control, flight deck automation and HCI on the flight deck. Part four completes the volume with a consideration of safety management issues both on the flight deck and across the airline. The final chapter in this section looks at human factors for incident and accident investigation. The book is written for professionals within the aviation industry, both on the flight deck and elsewhere, for post graduate students and for researchers working in the area.

Dr.

Stanton, Paul Dr. Salmon, Guy H. Dr. Walker, 2018-09-03 This book presents the latest developments of Systems Thinking in Practice to the analysis and design of complex sociotechnical systems The Event Analysis of Systemic Teamwork EAST method is applied to micro meso and macro systems Written by experts in the field this text covers a diverse range of domains including automation aviation energy grid distribution military command and control road and rail transportation sports and urban planning Extensions to the EAST method are presented along with future directions for the approach Illustrates a contemporary review of the status of Distributed Cognition DCOG Presents examples of the application of Event Analysis of Systemic Teamwork EAST method Presents examples of the application of Event Analysis of Systemic Teamwork EAST method Discusses the metrics for the examination of social task and information networks Provides comparison of alternative networks with implications for design of DCOG in systems Human Factors and Design Yuri

Spirochkin, 2023-02-27 This book describes various manifestations of human factors when interacting with potentially dangerous technical systems airplanes launch vehicles and spaceships nuclear power plants energy saturated ground vehicles and infrastructure facilities The idea of the book arose from the desire to find a common ground between industries

that are important for safety. Their similarity lies in addition to the technological advancement of products and solutions in equally high safety requirements in particular taking into account the influence of human factor. Thus it is of relevance to analyze an impact of human factor in the context of safety. The matter is rather complex on the one hand humans manage technical systems on the other hand human errors, negligence or evil intentions can turn the system into a threat with disastrous consequences. However, human interaction with any technical system begins earlier in the design stage. In this stage, designer being creator of the system must ensure a safe operation and take into consideration possible risks including those caused by human factors itself. The book is interdisciplinary in nature and intended mainly for designers of technical systems aiming to assist the specialists in understanding the issues of human participation in life cycle of these systems. The examples given are intended to benefit from experiences of not one but a number of industries.
