indicates the shortcomings of the current international legal system and customary international norms that govern
international aviation law to comply with contemporary air transport market realities As the air transport market develops
globally the safety regime of civil aviation should also be governed and applied globally In this book the author departs from
current international legal norms to examine the emerging legal field of global administrative law Through that lens the
possibility of reconstructing the set of legal mechanisms that govern domestic and international administrative interaction in
the global field of aviation safety is explored This book demonstrates that a legal system is never complete but always
develops in tandem with changing needs i e the participation of the affected parties Exploring the principles of GAL theory
contributes to addressing the contemporary legal issues relating to state compliance with international aviation safety
standards that would otherwise not be covered by customary international law In particular the principles of GAL theory
regarding global governance and the public character of global regulations the role of individuals and states in global
governance and state sovereignty are considered valuable contributions to contemporary global aviation safety issues in
practice It is asserted in this book that proper checks and balances in global aviation safety can be improved by making these
accessible to individuals by way of national courts Finally establishing public awareness of global aviation safety standards
will eventually create greater pressure on states to implement and enforce them This book is in an area increasing academic
and research interest of practitioners of public international aviation law global administrative law global governance and
