Wirelessness Adrian Mackenzie,2010-10-08 An account of the sensations associated with being entangled with wireless technologies that draws on the philosophical techniques of William James s radical empiricism How has wirelessness being connected to objects and infrastructures without knowing exactly how or where become a key form of contemporary experience Stretching across routers smart phones netbooks cities towers Guangzhou workshops service agreements toys and states wireless technologies have brought with them sensations of change proximity movement and divergence In Wirelessness Adrian Mackenzie draws on philosophical techniques from a century ago to make sense of this most contemporary postnetwork condition The radical empiricism associated with the pragmatist philosopher William James Mackenzie argues offers fresh ways for matching the disordered flow of wireless networks meshes patches and connections with felt sensations For Mackenzie entanglements with things gadgets infrastructures and services tendencies fleeting nuances and peripheral shades of often barely registered feeling that cannot be easily codified symbolized or quantified mark the experience of wirelessness and this links directly to James s expanded conception of experience Wirelessness designates

a tendency to make network connections in different times and places using these devices and services Equally it embodies a sensibility attuned to the proliferation of devices and services that carry information through radio signals Above all it means heightened awareness of ongoing change and movement associated with networks infrastructures location and information The experience of wirelessness spans several strands of media technological change and Mackenzie moves from wireless cities through signals devices networks maps and products to the global belief in the expansion of wireless worlds **APC**
