

# Quantitative Analysis Exam 1

## Study Guide

### Question 1 of 7 - Ch 0 homework

Put the steps in a chemical analysis in order from first to last.

#### First steps

- Formulate the question
- select an analytical procedure
- obtain a sample
- prepare the sample
- sample analysis
- report results
- draw conclusions

#### Last steps

conclusion

To perform a chemical analysis, an analytical chemist would first formulate a question that can be answered through chemical analysis. Then, the chemist should then prepare the analytical procedure for answer the question. Or, if there is not an appropriate method, the chemist would develop a new procedure. Once the method has been chosen, the chemist would collect a representative sample to be tested. The sample would then be prepared for analysis and analyzed. After sample analysis, the results of the analysis are reported. Finally, conclusions can be drawn from the analysis.

### Question 2 of 7 - Ch 0 homework
