Hopp, Mark L. Spearman, 2011-08-31 Our economy and future way of life depend on how well American manufacturing
managers adapt to the dynamic globally competitive landscape and evolve their firms to keep pace A major challenge is how
to structure the firms environment so that it attains the speed and low cost of high volume flow lines while retaining the
flexibility and customization potential of a low volume job shop The books three parts are organized according to three
categories of skills required by managers and engineers basics intuition and synthesis Part I reviews traditional operations
management techniques and identifies the necessary components of the science of manufacturing Part II presents the core
concepts of the book beginning with the structure of the science of manufacturing and a discussion of the systems approach
to problem solving Other topics include behavioral tendencies of manufacturing plants push and pull production systems the
human element in operations management and the relationship between quality and operations Chapter conclusions include
main points and observations framed as manufacturing laws In Part III the lessons of Part I and the laws of Part II are applied
to address specific manufacturing management issues in detail The authors compare and contrast common problems
including shop floor control long range aggregate planning workforce planning and capacity management A main focus in
Part III is to help readers visualize how general concepts in Part II can be applied to specific problems Written for both
engineering and management students the authors demonstrate the effectiveness of a rule based and data driven approach
to operations planning and control They advance an organized framework from which to evaluate management practices and
develop useful intuition about manufacturing systems **GED Test Prep 2023 / 2024 For Dummies** Tim
