Stancil, Anil Prabhakar, 2021-08-02 This book presents a collection of problems in spin wave excitations with their detailed solutions Each chapter briefly introduces the important concepts encouraging the reader to further explore the physics of spin wave excitations and the engineering of spin wave devices by working through the accompanying problem sets The initial chapters cover the fundamental aspects of magnetization with its origins in quantum mechanics followed by chapters on spin wave excitations such as the magnetostatic approximation Walker s equation the spin wave manifold in the three different excitation geometries of forward volume backward volume and surface waves and the dispersion of spin waves The latter chapters focus on the practical aspects of spin waves and spin wave optical devices and use the problem sets to introduce concepts such as variational analysis and coupled mode theory Finally for the more advanced reader the book covers nonlinear interactions and topics such as spin wave quantization spin torque excitations and the inverse Doppler effect The topics range in difficulty from elementary to advanced All problems are

solved in detail and the reader is encouraged to develop an understanding of spin wave excitations and spin wave devices while also strengthening their mathematical analytical and numerical programming skills *Catalogue Number for ...* M.
