

24-Volt Alternator Installation & Operation Manual

BALMAR
www.balmar.net

Introduction

Thank you for choosing a Balmar high-output alternator. This alternator is completely designed and engineered to provide the best performance and durability for your vessel. Unlike most other multi-stage alternators found aboard on the market of previous craft and marketed as universal marine alternators, ours, our marine alternators are built specifically for provide exceptional output at lower engine (p/r) r.p.m. speeds of marine diesel engines, for you can enjoy shorter charge cycles, greater economy, longer battery life and less noise and heat. When used in conjunction with Balmar's intelligent multi-stage (MS) 400 multi-stage regulator, your new Balmar alternator can provide even greater efficiency when charging deep-cycle flooded, standard flooded, gel, AGM, Optima and other marine battery technologies. When paired for your battery bank, the MS-400 regulator will guide your alternator through a charging program that's tailored to provide your batteries with the best care possible. In addition, Balmar multi-stage regulators provide the ability to temperature-sense or your alternator. Blocks are temperature-size-compensated, so as with an alternator, temperature-sense (TAS) T/A is installed, the regulator will reduce their output to 95 percent to allow the alternator to cool under lower load, and the (Cool) Lamp (on the regulator) will activate to provide power to a fused or fused start, avoiding the risk to damage to the source of the over-temperature condition. Together, the Balmar high-output alternator and multi-stage regulator work to ensure the best charge possible.

Safety Considerations

Before installing your new alternator, please take a moment to consider the following guidelines for safe alternator installation and operation. Failure to follow these guidelines could result in injury or damage to your vessel's electrical system.

Connections	2
Grounding	2
Wiring	2
Alternator Mounting	2
Wiring	2

1. Always disconnect your battery and turn your battery switch to "OFF" position prior to installing your alternator.
2. Remove any loose fitting clothing or jewelry which could become entangled in your engine or other machinery.
3. Wear ANSI-approved safety glasses at all times.
4. Ensure that the engine has cooled sufficiently before beginning installation.
5. DO NOT install your high-output alternator without ensuring that the system wiring is sufficiently rated to handle increased amperage loads.
6. Be sure that your work area is sufficiently ventilated and that no flames or hot vents are present in and around your work area.
7. DO NOT install your charging system without proper fusing. Failure to do so could result in severe injury and/or damage to part of your vessel. DO NOT take chances with fusing.
8. DO NOT attempt installation while using alcohol or medications which could impair your judgment or reaction time.
9. Use the right tool for the job. Use of improper tools could result in damage or injury.
10. Take time to read the manual. Read and understand all the proper installation and use of the alternator.

CAUTION: The following instructions are intended for use by experienced marine electrical installers. If you are not sufficiently experienced with marine electrical systems, we recommend a qualified electrician be used for installation.
