Law in Developing Economies Kayode Akintola, Folashade Adeyemo, 2022-12-30 The subject of bank stability has been under a great amount of political and legislative scrutiny since the mid 2007 to late 2009 global financial crisis. However, these efforts have centred on developed economies. Little coverage is given to strategies adopted by many developing economies. While there is a global discourse on the subject of insolvency, generally there is ample scope to contribute to the growing body of work on the narrow subject of bank insolvencies. This book provides a unique perspective on an emerging theme in at least two respects. First is the focus on selected developing economies and selected developed economies in the EMEA region alongside cross border developments with the objective of deciphering the regulatory approach to bank insolvencies. The second is the analytical consideration of methods that may be implemented to preclude or resolve bank insolvencies in developing economies. This book explores the nexus between developing economies and their banking institutions. Developing economies are acutely dependent on their banks for the functioning of their cash based economies. Recent events, however, suggest a weakness in the long term viability of some of their banks and a mixed bag regulatory approach to redress this weakness. This book evaluates the effectiveness of regulatory frameworks in selected developing economies that are designed to prevent or resolve the insolvency of banks. At a time of global economic uncertainty, this book will prove to be a valuable resource to the discourse on the viability of banks, businesses and economies in developing States. **Oswaal CBSE & NCERT One for All Class 12 Mathematics (For 2024 Exam)** Oswaal Editorial Board, 2023-07-12 Description of the product Strictly as per the latest CBSE Syllabus dated March 31, 2023. This new report, the fourth in the series, examines the topic of data driven development or how better information makes for better policies. The objective is to assist developing country firms and governments in unlocking the value of the data they hold for better service delivery and decision making and to empower individuals to take more control of their personal data. We are undoubtedly experiencing a data revolution in which our ability to generate process and utilize information has been magnified many times over by the machines that we increasingly rely upon. This report is about how the data revolution is changing the behavior of governments, individuals and firms and how these changes affect the nature of development, economic, social and cultural. How can governments extract value from data?

to improve service delivery in the same way that private companies have learned to do for profit Is it feasible for individuals to take ownership of their own data and to use it to improve their livelihoods and quality of life Can developing country firms compete with the internet majors on their own turf and be even more innovative in their use of data to serve local customers better Though the report is aimed primarily at government policy makers it also has great relevance for individuals concerned about how their personal data is used and how the data revolution might affect their future job prospects For private sector firms particularly those in developing countries the report suggests how they might expand their markets and improve their competitive edge For development professionals the report provides guidance on how they might use data more creatively to tackle long standing global challenges such as eliminating extreme poverty promoting shared prosperity or mitigating the effects of climate change The report's chapters explore different themes associated with the supply of data the technology underlying it and the demand for it An overview chapter focuses on government use of data and presentation of definitions Part I of the report then looks at the supply side of the data sector with chapters on data connectivity and capacity where data comes from how it is stored and where it goes and data technology specifically big data analytics and artificial intelligence and how this is contributing to development Part II looks at the sector's demand side with a chapter on people's use of data and another that examines how firms use digital platforms in the data economy and how that contributes to competitiveness Part III brings together the policy implications for developing country stakeholders with a chapter considering government policies for data including data protection and privacy A closing Data Notes appendix looks at statistical indicators associated with the use of data and presents the 2018 update of the Digital Adoption Index DAI a composite indicator introduced in the 2016 World Development Report Digital Dividends

Empirical Inference Bernhard Schölkopf, Zhiyuan Luo, Vladimir Vovk, 2013-12-11 This book honours the outstanding contributions of Vladimir Vapnik a rare example of a scientist for whom the following statements hold true simultaneously his work led to the inception of a new field of research the theory of statistical learning and empirical inference he has lived to see the field blossom and he is still as active as ever He started analyzing learning algorithms in the 1960s and he invented the first version of the generalized portrait algorithm He later developed one of the most successful methods in machine learning the support vector machine SVM more than just an algorithm this was a new approach to learning problems pioneering the use of functional analysis and convex optimization in machine learning Part I of this book contains three chapters describing and witnessing some of Vladimir Vapnik's contributions to science In the first chapter L on Bottou discusses the seminal paper published in 1968 by Vapnik and Chervonenkis that lay the foundations of statistical learning theory and the second chapter is an English language translation of that original paper In the third chapter Alexey Chervonenkis presents a first hand

account of the early history of SVMs and valuable insights into the first steps in the development of the SVM in the framework of the generalised portrait method The remaining chapters by leading scientists in domains such as statistics theoretical computer science and mathematics address substantial topics in the theory and practice of statistical learning theory including SVMs and other kernel based methods boosting PAC Bayesian theory online and transductive learning loss functions learnable function classes notions of complexity for function classes multitask learning and hypothesis selection These contributions include historical and context notes short surveys and comments on future research directions This book will be of interest to researchers engineers and graduate students engaged with all aspects of statistical learning

Creating the Productive Workplace Derek Clements-Croome, 2017-09-22 The built environment affects our physical mental and social well being Here renowned professionals from practice and academia explore the evidence from basic research as well as case studies to test this belief They show that many elements in the built environment contribute to establishing a milieu which helps people to be healthier and have the energy to concentrate while being free to be creative The health and well being agenda pervades society in many different ways but we spend much of our lives in buildings so they have an important role to play within this total picture This demands us to embrace change and think beyond the conventional wisdom while retaining our respect for it Creating the Productive Workplace shows how we need to balance the needs of people and the ever increasing enabling technologies but also to take advantage of the healing powers of Nature and let them be part of environmental design This book aims to lead to more human centred ways of designing the built environment with deeper meaning and achieve healthier and more creative as well as more productive places to work

Plurality and Quantification F. Hamm, Erhard W. Hinrichs, 2013-03-14 The papers in this volume address central issues in the study of Plurality and Quantification from three different perspectives Algebraic approaches to Plurals and Quantification Distributivity and Collectivity Theoretical Foundations Distributivity and Collectivity Empirical Investigations Algebraic approaches to the semantics of natural languages were independently introduced for the study of generalized quantification predication intensionality mass terms and plurality The most prominent modern advocate for an algebraic theory of plurality and mass terms is certainly Godehard Link It is indicative of the Wirkungsgeschichte of Link s work that most of the contributions in this volume take the logic of plurals proposed by Godehard Link Link 1983 1987 as their foundation or at the very least as their point of reference Link s own paper in this volume provides a concise summary of many of the central research issues that have engaged semanticists during the last decade Link s paper also contains an extensive bibliography that provides an excellent resource for scholars interested in the semantics of plurals Since we can refer readers to Link s paper for an excellent survey of the subject matter of this book we will limit our attention in this introduction to summarizing the individual contributions in this volume The book is organized into three main sections within each section the papers are ordered alphabetically However as in much of linguistic theorizing there is an exception for reasons pointed out above Godehard Link s article appears as Chapter 1
