Lab Manual for General, Organic, and Biochemistry Denise Guinn, Rebecca Brewer, 2009-08-21

Teaching all of the necessary concepts within the constraints of a one-term chemistry course can be challenging. Authors Denise Guinn and Rebecca Brewer have drawn on their 14 years of experience with the one-term course to write a textbook that incorporates biochemistry and organic chemistry throughout. Each chapter emphasizes cases related to allied health and provides students with the practical quantitative skills they will need in their professional lives. *Essentials of General Organic and Biochemistry* captures student interest from day one with a focus on attention-getting applications relevant to health-care professionals and as much pertinent chemistry as is reasonably possible in a one-term course. Students value their experience with chemistry, getting a true sense of just how relevant it is to their chosen profession. CONCEPTS Women in Nuclear Engineering Research Anne Campbell, Tonya Vitova, Charlotte Becquart ,Marta Serrano Garcia,2024-12-24 Gender inequality represents one of the major problems that affect the academic world and scientific progress At present less than 30% of researchers worldwide are women Long standing biases and gender stereotypes discourage women away from science related fields especially engineering Engineering as a whole is a historically and currently male dominated research field and ensuring that female voices and research receive equal and indeed greater visibility attention and respect is of vital importance Scientific progress is only possible and greatly accelerated if we have gender equality More women involved in a scientific field results in an expansion of the general knowledge in that field Today while a gender equal society might be seen as both beneficial and desirable it is becoming extremely important to show especially to younger generations the growing impact of female researchers in science Energy Research Abstracts ,1987
