Inspect

The inspection and repair of fuel injectors require special tools and training. A special repair service normally makes repairs on injectors. Fuel injectors that have a malfunction will cause black smoke in the exhaust, a decrease in engine power, and an increase in engine noise.

Install

1. Make sure the threads of the nut and the threads in the cylinder head are clean. See Figure 14-4.

CAUTION

Do not allow any thread sealant below the threads of the nut.

2. Make sure the wire clip is correctly installed. Put a 2 mm (0.08 in.) bead of thread sealant onto the first two threads of the nut. The thread sealant is either Perkins POWERPART Atomizer Thread Sealant or Hylomar Advance Formulation, Part No. 21825-474. The bead should extend approximately 6 mm (0.24 in.) around each of the threads. Make sure there is no thread sealant on the body of the fuel injector.
3. Use a new seat washer. Make sure the original seat washer was removed from the cylinder head or the fuel injector will not fit correctly.
4. Install the fuel injector into the cylinder head. Make sure the location ball fits into the groove.

CAUTION

Do not move the nut after it has been tightened. The seal will be broken and there can be leaks past the seat of the fuel injector.

5. Tighten the nut smoothly to 40 N•m (30 lbf ft). As the nut is tightened, the fuel injector will rotate a small amount clockwise as the location ball moves in its slot. Remove any excess thread sealant.

CAUTION

Do not tighten the union nuts of the high pressure pipes more than the recommended torque tension. If there is a leakage from the union nut, make sure that the pipe is correctly aligned with the fuel injector inlet. Do not tighten the fuel injector union nut more, as this can cause a restriction at the end of the pipe. This can affect the fuel delivery.

6. Remove the plastic cap and install the high pressure fuel line. Tighten the union nuts to 22 N•m (16 lbf ft).
7. Use new seal washers and install the fuel return line to the connection. Tighten the bolt on the banjo fitting to 9.5 N•m (84 lbf in).
8. If the fuel system is empty, remove the air from the fuel system. See Fuel System Air Removal.
9. When the engine can be operated, check for fuel leaks.
