Federal Register, 2012-06 *How We Teach Science* John L. Rudolph, 2019-06-01 Despite an enduring belief that science should be taught there has been no enduring consensus about how or why This is especially true when it comes to teaching scientific process John Rudolph shows that how we think about and teach science will either sustain or thwart future innovation and determine how science is perceived by the public **ERDA Energy Research Abstracts** United States. Energy Research and Development Administration, 1977 **Technical Information Pilot**, 1951 *The Chemical News and Journal of Physical Science*, 1904 *The Making of the Australian National University, 1946-1996* Stephen Glynn Foster, Margaret M. Varghese, 2009-08-01 First published 1996 This edition with new introduction published July 2009 The Australian National University has always been a university with a difference Conceived in the mid 1940s to serve Australia's post war needs for advanced research and postgraduate training it quickly embraced the ideals and traditions of Oxford and Cambridge Undergraduate teaching was introduced in 1960 following amalgamation with Canberra University College The University continued to adapt to changes in Australian society while retaining much of its unique structure and objectives Stephen Foster and Margaret Varghese trace the ANU's history from its wartime origins to its fiftieth anniversary in 1996 featuring many of the prominent Australians who contributed to its making Nugget Coombs Howard Florey Mark Oliphant W K Hancock Douglas Copland John Crawford Peter Karmel and others who stood out in particular fields such as J C Eccles Arthur Birch Manning Clark Russell Mathews Ernest Titterton Beryl Rawson John Mulvaney John Passmore and Frank Fenner The Making of The Australian National University explores many themes in higher education during the last half century including academic freedom relations between universities and politicians recruitment practices the two cultures of science and the humanities collegial versus managerial structures equality of opportunity student politics academics and architecture and universities in the marketplace This is an affectionate and critical account of a remarkable Australian institution and more broadly a fascinating study of how institutions work *Rearming for the Cold War, 1945-1960* Elliott Vanveltner Converse, 2012 Book Description The first publication in a multivolume series on the history of the acquisition of major weapon systems by the Department of Defense author Elliott Converse presents a meticulously researched overview of changes in acquisition policies organizations and processes within the United States military establishment during the decade and a half following World War II Many of the changes that shaped the nature and course of weapons research and development production and contracting through the end of the century were instituted between 1945 and 1960 many of the problems that have repeatedly challenged defense policymakers and acquisition professionals also first surfaced during these years This study is the first to combine the histories of the Office of the Secretary of Defense OSD and the military services into one account The volume is organized chronologically with individual chapters addressing the roles of OSD the Army Navy and Air Force in two distinct periods **History of Acquisition in the Department of Defense, Volume 1** Elliott V.

Converse,2012-06-12 This volume is a history of the acquisition of major weapon systems by the United States armed forces from 1945 to 1960 the decade and a half that spanned the Truman and Eisenhower administrations following World War II These instruments of warfare aircraft armored vehicles artillery guided missiles naval vessels and supporting electronic systems when combined with nuclear warheads gave the postwar American military unprecedented deterrent and striking power 1 They were also enormously expensive The volume is organized chronologically with individual chapters addressing the roles of OSD the Army Navy and Air Force in two distinct periods The first roughly coinciding with President Truman s tenure covers the years from the end of World War II through the end of the Korean War in 1953 The second spans the two terms of the Eisenhower presidency from 1953 through early 1961 The year 1953 marked a natural breakpoint between the two periods The Korean War had ended President Eisenhower and his defense team began implementing the New Look a policy and strategy based on nuclear weapons which they believed would provide security and make it possible to reduce military spending The New Look s stress on nuclear weapons along with the deployment of the first operational guided missiles and the rapid advances subsequently made in nuclear and missile technology profoundly influenced acquisition in the services throughout the 1950s and the remainder of the century As used in this study the term acquisition encompasses the activities by which the United States obtains weapons and other equipment In surveying the history of acquisition between 1945 and 1960 this study discusses or refers in passing to many of the hundreds of weapon system programs initiated by the services in that period but it is not a weapons encyclopedia Instead it investigates a few major programs in depth in the belief that such detailed examination best reveals the evolution of acquisition policies organizations and processes and the various forces influencing weapons programs *A Patron for Pure Science* James Merton England,1983

Opening Space Research George H. Ludwig,2013-05-09 Published by the American Geophysical Union as part of the Special Publications Series Opening Space Research Dreams Technology and Scientific Discovery is George Ludwig s account of the early development of space based electromagnetic physics with a focus on the first U S space launches and the discovery of the Van Allen radiation belts Narrated by the person who developed many of the instruments for the early Explorer spacecraft during the 1950s and participated directly in the scientific research it draws heavily upon the author s voluminous collection of laboratory notes and other papers upon the Van Allen archive and upon a wide array of other sources This book presents very detailed discussions of historic events in a highly readable semitechnical first person form More than that though Opening Space Research brings to the forefront the entire team of scientists who made these accomplishments possible providing an extensive index of names to enhance and complete the historical record Authoritative and unique this book will be of interest to space scientists science historians and anyone interested in space history and the first U S space launches **Yerkes Observatory, 1892-1950** Donald E. Guide to U.S. Government Publications Donna Batten,2001 **An Ocean in Common** Gary E. Weir,2001 Through two victorious world conflicts and a Cold War the U S Navy and American ocean scientists drew ever closer converting an early marriage of necessity into a relationship of astonishing achievement Beginning in 1919 Gary Weir s *An Ocean in Common* traces the first forty two years of their joint quest to understand each other and the deep ocean Early in the twentieth century American naval officers questioned the tactical and strategic significance of applied ocean science demonstrating the gap between this kind of knowledge and that deemed critical to naval warfare At the same time scientists studying the ocean labored in their inadequately funded discreet disciplines seemingly content to keep naval warfare at arm s length German U boat success in World War I changed these views fundamentally bringing ocean science insights to an increasing number of naval objectives Driven primarily by anti submarine priorities the physics chemistry and geology of the ocean more than its biology became the early focus of American ocean studies The World War II experience solidified the Navy s relationship with ocean scientists and the years after 1945 found the American military investing heavily in both applied and basic research Today oceanography is a permanent resident on the bridge of American fighting ships and the Navy continues to provide much of the impetus and funding for fundamental research in both naval and civilian laboratories In *An Ocean in Common* Gary Weir focuses on the compelling motives and carefully engineered course that brought scientists and naval officers together across a considerable cultural divide to achieve a more comprehensive understanding of one another and the world ocean Weir details how this alliance laid the powerful multidisciplinary foundation for long range ocean communication and surveillance modern submarine warfare deep submergence and the emergence of oceanography and ocean engineering as independent and vital fields of study **Parliamentary Papers** Great Britain. Scientists in the Classroom J. Rudolph,2002-05-02 During the 1950s leading American scientists embarked on an unprecedented project to remake high school science education Dissatisfaction with the soft school curriculum of the time advocated by the professional education establishment and concern over the growing technological sophistication of the Soviet Union led government officials to encourage a handful of elite research scientists fresh from their World War II successes to revitalize the nations science curricula In *Scientists in the Classroom* John L Rudolph argues that the Cold War environment long neglected in the history of education literature is crucial to understanding both the reasons for the public acceptance of scientific authority in the field of education and the nature of the curriculum materials that were eventually produced Drawing on a wealth of previously untapped resources from government and university archives Rudolph focuses on the National Science Foundation supported curriculum projects initiated in 1956 What the historical record reveals according to Rudolph is that these materials were designed not just to improve American science education but to advance

the professional interest of the American scientific community in the postwar period as well *ESSA Science and Engineering* United States.
