Kienle, 2010-09-17 Those who want to learn about AOM find in this special issue a concise collection of descriptions of solid and mature AOM approaches They only have to take the time to understand one case study in order to appreciate the sample models shown in all papers Those who want to apply AOM for a particular purpose and are looking for the most appropriate AOM technique can use the papers presented in this special issue to identify the most promising approaches By identifying similarities between their problem and the case study they should be able to determine candidate AOM approaches easily Those working on their own AOM approach can readily identify approaches that were able to handle concerns that their own approach is not able to handle elegantly This stimulates cross fertilization between approaches and collaborative research Those engineering researchers that are working on enhancing software development processes can use the example models presented in this special issue to understand the potential benefits of using AOM techniques at different phases of the software development life cycle

Data Management in a Connected World Theo Härder, Wolfgang Lehner, 2005-06-14

Data management systems play the most crucial role in building large applications Since modern applications are no longer single monolithic software blocks but highly flexible and configurable collections of cooperative services the data management layer also has to adapt to these new requirements Therefore within recent years data management systems have faced a tremendous shift from the central management of individual records in a transactional way to a platform for data integration federation search services and data analysis This book addresses these new issues in the area of data management from multiple perspectives in the form of individual contributions and it outlines future challenges in the context of data management These contributions are dedicated to Prof em Dr Dr Ing E h Hartmut Wedekind on the occasion of his 70th

birthday and were co authored by some of his academic descendants Prof Wedekind is one of the most prominent figures of the database management community in Germany and he enjoys an excellent international reputation as well Over the last 35 years he greatly contributed to making relational database technology a success As far back as the early 1970s he covered as the first author in Germany the state of the art concerning the relational model and related issues in two widely used textbooks Datenbanksysteme I and Datenbanksysteme II Without him the idea of modeling complex structured real world scenarios in a relational way would be far less developed by now Among Prof
