Dark Energy and Human Consciousness Tom Cahalan, 2014-07-22 Nobody knows how life was first breathed into the first atom molecule or cell all biologists can do is to suggest the most reasonable possibilities by analysing the oldest DNA available Scientists postulate that life emerged from non life via natural processes about 3 7 billion years ago It then evolved and continues to evolve to higher levels of complexity based on mutation natural selection and time In other words scientists believe that life is purely a physical phenomenon There are logical arguments based on scientific concepts suggesting that dark energy is a non physical force that influences life and is the source of reason intelligence compassion and love If we acknowledge and nurture this non physical dark energy aspect of our beings it will bring balance to our minds and move us from selfishness to love care and compassion Is this the path to freedom from selfishness corruption abuse of power and greed and consequently from poverty starvation conflict and war

[Pro ASP.NET Web Forms Techniques](#) Alex Homer, 2008-01-01 ASP NET MAKES IT EASY to create interactive and intuitive interfaces for Web applications and attractive and exciting Web pages The server based postback architecture combined with the comprehensive army of server controls that are provided as part of the NET

Framework allow developers to quickly build browser based interfaces for Web sites and Web applications using much the same event driven approach as in traditional executable programs developed in languages like Visual Basic Delphi and C. This is a completely new and different way of working from previous versions of ASP and the underlying principles and workings of server based events which occur in response to actions made by the user in the page can prove to be difficult to grasp in their entirety. However constructing ASP.NET pages especially with some of the tools that are available or under development now is very much easier and often less error prone than in classic ASP. Besides a completely server based approach to user interaction does have its downsides. In high latency scenarios or over slow network connections the need to hit the server every time the page content needs to be modified can intrude on the workings of an application or reduce the perceived responsiveness of a Web site.
