Self-regulation day is a good tradition in our school. This year two students from Grade 10, Pavel and Masha, gave an English lesson to Grade 5. The younger students were happy to meet new teachers. Pavel and Masha are responsible and creative. It was an unusual lesson. The younger students travelled to "Wonderland". During the journey they worked hard: asked and answered the questions, did the puzzles and learnt new words. They didn't learn grammar rules and write tests. All the students got good marks. Pavel and Masha enjoyed teaching English.

importance. Certainly one reason for this opinion is the rapid development of computer science and the use of discrete mathematics as one of its major tools. The purpose of this book is to convey to graduate students or to final year undergraduate students the fact that the abstract algebra encountered previously in a first algebra course can be used in many areas of applied mathematics. It is often the case that students who have studied mathematics go into postgraduate work without any knowledge of the applicability of the structures they have studied in an algebra course. In recent years there have emerged courses and texts on discrete mathematics and applied algebra. The present text is meant to add to what is available by focusing on three subject areas. The contents of this book can be described as dealing with the following major themes: Applications of Boolean algebras: Chapters 1 and 2; Applications of finite fields: Chapters 3 to 5; Applications of semigroups: Chapters 6 and 7.
