Coercion in Community Mental Health Care Andrew Molodynski,Jorun Rugkåsa,Tom Burns,2016 The use of coercion is one of the defining issues of mental health care Since the earliest attempts to contain and treat the mentally ill power imbalances have been evident and a cause of controversy There has always been a delicate balance between respecting autonomy and ensuring that those who most need treatment and support are provided with it Coercion in Community Mental Health Care International Perspectives is an essential guide to the current coercive practices worldwide both those founded in law and those informal processes whose coerciveness remains contested It does so from a variety of perspectives drawing on diverse disciplines such as history law sociology anthropology and medicine to provide a comprehensive summary of the current debates in the field Edited by leading researchers in the field Coercion in Community Mental Health Care International Perspectives provides a unique discussion of this prominent issue in mental health Divided into five sections covering origins and extent evidence experiences context and international perspectives this is ideal for mental health practitioners social scientists ethicists and legal professionals wishing to expand their knowledge of the subject area

Reducing the Mortality Gap in People with Severe Mental Disorders: the Role of Lifestyle Psychosocial Interventions Andrea Fiorillo,Maurizio Pompili,Mario Luciano,Norman Sartorius,2019-10-15 Patients with severe mental disorders SMD including major depression bipolar disorder schizophrenia and related spectrum disorders have a reduced life expectancy of 10 25 year compared with the general population This life expectancy gap is mainly due to the co occurrence of many physical diseases such as hypertension coronary heart disease stroke chronic obstructive pulmonary disease tuberculosis hepatitis and HIV Factors contributing to the reduced life expectancy can be grouped into three main categories a factors related to the patient b factors related to clinicians and c factors related to the health system As regards the first group patients with SMD often adopt unhealthy lifestyle behaviors including heavy smoking reduced physical activity sedentary behaviors poor diet and alcohol or drug abuse and are reluctant to seek for physical care with GPs and other medical specialists Increasing the levels of physical activity improving the dietary patterns and reducing the smoking habits of people

with severe mental disorders represent a global health challenge and a public health priority. Until now, attempts made to reduce this mortality gap have acted at three different levels: health system level, physician level, and patient level. The third level interventions include electronic alerts through smartphones and web-based platforms, intensive case management, promotion of healthy habits, complex psychosocial interventions. Several population-based studies have showed that lifestyle behaviors are amenable to change through the adoption of specific psychosocial interventions. However, most clinical guidelines, although emphasizing the importance of health monitoring and regular check-ups for patients with severe mental illnesses, do not make specific recommendations on the provision of lifestyle interventions. These lifestyle-oriented interventions, consisting of behavioral, educational, and psychological components, have been conducted mainly in research settings and have shown a good impact on patients' physical health. Despite this, their feasibility in routine settings has not been tested yet. It seems to be clinically and ethically relevant to develop, validate, and carry out interventions to improve the lifestyle behaviors of patients with severe mental disorders to reduce the presence of comorbidities and to improve their life expectancy. In this Research Topic, we will summarize the available knowledge of the efficacy and effectiveness of psychosocial interventions aimed at improving healthy lifestyle behaviors and promoting the physical health of patients with severe mental disorders.
