The Future of Technology Education P John Williams, Alister Jones, Cathy Bunting, 2014-11-17 Twenty five years ago there was increasing optimism in policy curriculum and research about the contribution that technology education might make to increased technological literacy in schools and the wider population That optimism continues although the status of technology as a learning area remains fragile in many places This edited book is offered as a platform from which to continue discussions about how technology education might progress into the future and how the potential of technology education to be truly relevant and valued in school learning can be achieved The book results from a collaboration between leading academics in the field the wider group of authors having had input into each of the chapters Through the development of a deep understanding of technology based on a thoughtful philosophy pathways are discussed to facilitate student learning opportunities in technology education Consideration is given to the purpose s of technology education and how this plays out in curriculum pedagogies and assessment Key dimensions including design critique students cultural capital are also explored as are the role and place of political persuasion professional organisations and research that connects with practice The discussion in the book leads to a conclusion that technology education has both an ethical and moral responsibility to support imaginings that sustain people and communities in harmony and for the well being of the broader ecological and social environment

From School Board to Local Authority Eric Eaglesham, 2025-03-03 First published in 1956 *From School Board to Local Authority* is a meticulous and exact inquiry into the events which led up to the famous *Cockerton v The School Board for London* case It suggests that the reorganization of the education system in 1902 was not primarily the result of an unexpected legal decision in *Cockerton* Judgement rather was the outcome of a deliberate policy evolved by Morant and Gorst aimed at ending the administrative confusion which then existed The book is based mainly on the material found on the files of the Education Department the Science and Art Department and the Local Government Board It further reveals the administrative confusion and jealousies of these Departments shown as conflicts about Higher Grade Schools Secondary Schools Organized Science Schools and Evening Schools

The Universities and British Industry Michael Sanderson, 2018-10-11 Originally published in 1972 *The University and British Industry* examines the lively and controversial relationship between British industry and the university The book looks at the impact of industry on the development of British universities from the 1850s to the 1970s and with contribution from the universities to industry through scientific research and the supply of graduate skills The book argues that the close involvement of the universities and industry has been one of the chief beneficial forces shaping the British universities movement in the last hundred years It gives an account of the changes which took place within the universities to make them more suitable for industries purposes

describing for example the early rise of the English civic universities strongly financed by and closely supporting industry The book also considers how during the two world wars industry became highly reliant on the universities for the war technology and how despite the depression between the wars university research and graduate employment embraced the widening opportunities of the new industries The book also discusses the expansion of the university in the sixties and points out that industrial motives have merged with those of social justice posing dilemmas for present and future relations between universities and industry
