

## INTRODUCTION TO ENGINES

The four-stroke small engine that powers your lawn mower, tiller, generator and many other types of equipment is a gasoline engine that generates the precise amount of power necessary to get the job done. Here's how the components in your engine interact.

### English components & their description

The reeled cord is pulled to start the combustion process. On some models, a starter motor replaces the reeled, drawing on battery power to start the engine.

Reviewing agents work in conjunction with the quality assurance and auditing to produce work in the combined manner.

The carburetor draws in fuel from the fuel tank and outside air to form a combustible vapor that is fed into the combustion chamber.

**Jerabe and Ashman online open and close at precisely timed intervals to let air and fuel enter the engine and to let spent gases exit.**

The piston is pushed through the cylinder by the force of expanding gases. The piston's motion causes the crankshaft to turn. Momentum then carries the piston back toward the top of the cylinder.

Oil stored in the crankcase circulates through the engine to lubricate key components like the piston and crankshaft and to provide generalized cooling by drawing away heat from internal engine surfaces.

A *Safety*® limit switch and safety are included on engines for equipment such as mowers that require constant supervision. The two components are designed to stop the engine if you release the controls.

An air mass or flapgate monitor engine RPM's so the governor can maintain the selected engine speed.

Cooling fans help reduce engine temperatures when air circulates across the hottest engine surfaces.
