Introduction: All stars turn hydrogen into helium in a process called **nuclear fusion**. Stars perform this process in different ways. In stars like our sun, the **proton-proton chain** is used. This reaction requires temperatures greater than 4,000,000 K to occur.

Question: How does the process of fusion turn hydrogen into helium in stars?

1. **Observe:** Click **Fire proton** and observe. What happens after the proton merges into the nucleus? _

Positron is emitted as well as a proton is converted into a neutron.

This is a form of nuclear decay called **positron emission**. During positron emission, a proton decays into a neutron. In this process, it emits a **positron**, which is a nearly massless antimatter particle with a positive charge.

2. **Observe:** Click **Reset** and click **Fire proton**. Observe what happens. Many subatomic particles appear frequently in nuclear reactions. Their element symbols are given below:

(Neutrinos

 are also produced but are beyond the scope of this Gizmo.)

Click **Reset** and click **Fire proton**. Turn on the **Write equation** checkbox. Based on what you have observed, write in the equation for this reaction in the Gizmo and below.

- A. Turn on **Show equation**. Was your predicted equation correct? Yes

Correct your equation if necessary. The resulting H-2 isotope is called **deuterium**.

- B. Emitted energy is reported in megaelectron volts (MeV), where one MeV is equal to one million **electron volts**. How much energy is emitted in this reaction? _

1.44 MeV

Radiopharmaceutical Chemistry Jason S. Lewis, Albert D. Windhorst, Brian M. Zeglis, 2019-04-02 This book is a comprehensive guide to radiopharmaceutical chemistry The stunning clinical successes of nuclear imaging and targeted radiotherapy have resulted in rapid growth in the field of radiopharmaceutical chemistry an essential component of nuclear medicine and radiology However at this point interest in the field outpaces the academic and educational infrastructure needed to train radiopharmaceutical chemists For example the vast majority of texts that address radiopharmaceutical chemistry do so only peripherally focusing instead on nuclear chemistry i.e. nuclear reactions in reactors heavy element radiochemistry i.e. the decomposition of radioactive waste or solely on the clinical applications of radiopharmaceuticals e.g. the use of PET tracers in oncology This text fills that gap by focusing on the chemistry of radiopharmaceuticals with key coverage of how that knowledge translates to the development of diagnostic and therapeutic radiopharmaceuticals for the

clinic The text is divided into three overarching sections First Principles Radiochemistry and Special Topics The first is a general overview covering fundamental and broad issues like The Production of Radionuclides and Basics of Radiochemistry The second section is the main focus of the book In this section each chapter s author will delve much deeper into the subject matter covering both well established and state of the art techniques in radiopharmaceutical chemistry This section will be divided according to radionuclide and will include chapters on radiolabeling methods using all of the common nuclides employed in radiopharmaceuticals including four chapters on the ubiquitously used fluorine 18 and a Best of the Rest chapter to cover emerging radionuclides Finally the third section of the book is dedicated to special topics with important information for radiochemists including Bioconjugation Methods Click Chemistry in Radiochemistry and Radiochemical Instrumentation This is an ideal educational guide for nuclear medicine physicians radiologists and radiopharmaceutical chemists as well as residents and trainees in all of these areas

Environmental Sociology and Social Transformation Magnus Boström, Rolf Lidskog, 2024-06-07 Environmental Sociology and Social Transformation demonstrates how sociological theory and research are critical for understanding the social drivers of global environmental destruction and the conditions for transformative change Written by two professors of sociology who are deeply involved in the international community of environmental sociology Magnus Boström and Rolf Lidskog argue that we need to better understand society as well as the fundamentally social nature of environmental problems and how they can be addressed The authors provide answers to why so many unsustainable practices are maintained and supported by institutions and actors despite widespread knowledge of their negative consequences Employing a pluralistic sociological approach to the study of social transformations the book is divided into five key themes Causes Distributions Understandings Barriers and Transformation Overall the book offers an integrative and comprehensive understanding of the social dimension of unsustainability societal inertia and conditions for transformative change It provides the reader with references from classic and contemporary sociology and uses pedagogical features including boxes and questions for discussion to help embed learning Arguing that a broad and deep social transformation is needed to avoid a global civilization crisis Environmental Sociology and Social Transformation will be a great resource for students and scholars who are exploring current environmental challenges and the societal conditions for meeting them

Transformation of the Indian Armed Forces: 2025 Maj Gen A K Lal (Retd), 2012-05-09 Transformation should lie at the heart of our new approach to defense The development of transformational capabilities processes and force structures should be given strategic focus to meet the principal challenges under our defense strategy India is already faced with the necessity of transformation albeit without any documented national security guidelines or operating instructions which are legislated or have the validation of at least the Cabinet Committee on Security CCS In other words the first step would be to create a draft security strategy based on many assumptions like the foreign policy or the cumulative emerging threat scenario as appreciated by the Defence Intelligence Agency DIA This well researched book is a result of the project allotted by the USI under the Field Marshal K M Cariappa chair The book is therefore more as an idea or a theoretical construct basically to bring in more clarity to the various options available for this great transformation of the Indian military The author has deliberated upon various landmarks of transformation milestones achieved so far by the three services and given

recommendations to further build upon ongoing modernization plan and shift to a higher plane of transformational activities

The Extravagant Universe Robert P. Kirshner, 2016-10-04 The Extravagant Universe tells the story of a remarkable adventure of scientific discovery One of the world's leading astronomers Robert Kirshner takes readers inside a lively research team on the quest that led them to an extraordinary cosmological discovery the expansion of the universe is accelerating under the influence of a dark energy that makes space itself expand In addition to sharing the story of this exciting discovery Kirshner also brings the science up to date in a new epilogue He explains how the idea of an accelerating universe once a daring interpretation of sketchy data is now the standard assumption in cosmology today This measurement of dark energy a quality of space itself that causes cosmic acceleration points to a gaping hole in our understanding of fundamental physics In 1917 Einstein proposed the cosmological constant to explain a static universe When observations proved that the universe was expanding he cast this early form of dark energy aside But recent observations described first hand in this book show that the cosmological constant or something just like it dominates the universe's mass and energy budget and determines its fate and shape Warned by Einstein's blunder and contradicted by the initial results of a competing research team Kirshner and his colleagues were reluctant to accept their own result But convinced by evidence built on their hard earned understanding of exploding stars they announced their conclusion that the universe is accelerating in February 1998 Other lines of inquiry and parallel supernova research now support a new synthesis of a cosmos dominated by dark energy but also containing several forms of dark matter We live in an extravagant universe with a surprising number of essential ingredients the real universe we measure is not the simplest one we could imagine **Introduction to**
