

## People with gout

### Who have:

- Multiple or troublesome flares
- Chronic kidney disease
- Stages 3 to 5 (glomerular filtration rate categories G3 to G5)
- Tophi
- Diuretic therapy
- Chronic gouty arthritis

Consider rheumatology referral for CKD stages 3b to 5

### Who have:

- First or subsequent gout flare
- Not within the groups listed to the left

Consider rheumatology referral if diagnosis of gout is uncertain

Consider rheumatology referral if they have had an organ transplant

## Urate-lowering therapy (ULT)

Offer ULT

Consider ULT

## Urate lowering therapy (ULT)

Suppresses serum urate level, prevents formation of new monosodium urate crystals, and dissolves existing crystal deposits. This can cause gout flares to cease, tophi to shrink, and prevent long-term joint damage. This graphic summarises the recommendations from the 2022 National Institute for Health and Care Excellence (NICE) guideline, focusing on ULTs.

## Discuss benefits and risks of treatment

### Progression

Explain that the disease commonly progresses without intervention because high levels of urate in the blood form new urate crystals

### Timescale

Explain that gout is a lifelong condition that will benefit from long term treatment

### Side effects

Discuss the risks of taking medicines to prevent gout flares when starting or titrating ULT

## Treatment choice

### Febuxostat

Target serum urate levels likely to be achieved quicker

Fewer appointments required to up-titrate as there are only two doses which are given

### Allopurinol

Fewer adverse events

May be cheaper in subsequent years after the first, depending on the proportion of people receiving different doses of the two drugs

Should be offered first line to people who have major cardiovascular disease

## First line treatment

Offer either allopurinol or febuxostat

## Second line treatment

Consider switching to allopurinol or febuxostat

## Timing

Start ULT at least 2 to 4 weeks after a gout flare has settled

If flares are more frequent, ULT can be started during a flare

## Monitoring

Consider annual monitoring of serum urate level in people who are continuing ULT after reaching their target serum urate level

## Long term treatment

### Treat-to-target strategy

Start with low-dose ULT and use monthly serum urate levels to guide dose increases, as tolerated, until target serum urate level is reached

### Target serum urate level

Aim for below 360 micromol/litre (6 mg/dL)

Start with low-dose ULT and use monthly serum urate levels to guide dose increases, as tolerated, until target serum urate level is reached

Consider below 300 micromol/litre (5 mg/dL)

for Tophi or chronic gouty arthritis

Ongoing frequent flares despite serum urate level below 360 micromol/litre (6 mg/dL)

Consider rheumatology referral if treatment is contraindicated, not tolerated or ineffective

## Preventing gout flares when starting ULT

### Offer colchicine

While target serum urate level is being reached

### Contraindications

If colchicine is contraindicated or not suitable:

Consider a low-dose NSAID or Consider a low-dose oral corticosteroid

In June 2022, this was an off-label use of NSAIDs and corticosteroids

Also consider adding a proton pump inhibitor

Taking into account individual risk factors for adverse events

Do not offer an IL-1 inhibitor unless NSAIDs, colchicine, and corticosteroids are unsuitable or ineffective

Refer to rheumatology before prescribing
