Saturn James L. Martin, 2003 First observed by Galileo Saturn lies in the distant reaches of the solar system it is the sixth planet a gaseous giant between Jupiter and Uranus It takes its name from the mythological father of Jupiter and Roman god of agriculture Because of the famous circle of rings Saturn is one of the most well regarded occupants of the galaxy Despite their continuous appearance from Earth the rings are actually space dust and debris trapped by Saturn s gravitational pull a fact garnered from several satellite passes and telescope observations The origin of Saturn s rings however remains a mystery Apart from the rings we also are aware of its moon system with the most
