

Section 20.1 Crust-Mantle Relationships (pg 523-525)

Earth's topography

Oceans cover about 71% of the Earth's surface.

Most of Earth's elevations are between 2 ranges (modes).

0 to 1 Km above sea level and 4 to 5 Km below sea level.

Why are there these differences in elevation?

1. Since ocean crust (basalt) is more dense than continental crust (granite), ocean crust will displace more of the mantle.
2. The continental crust is also thicker than the ocean crust. This allows it to extend deeper into the mantle and rises above the oceans.
